### U.S. Outpatient Influenza-Like Illness Surveillance Network (ILINet) Sentinel Providers

An ILINet (sentinel) provider conducts surveillance for influenza-like illness (ILI) in collaboration with the Division of Public Health and the Centers for Disease Control and Prevention (CDC). Data reported by ILINet providers, in combination with other influenza surveillance data, provide a national and statewide picture of influenza activity in the U.S.

Percentage of Visits for Influenza-Line Illness Reported by Sentinel Providers<sup>1</sup> participating in the U.S. Outpatient ILI Surveillance Network (ILINet), Delaware 2019-2020

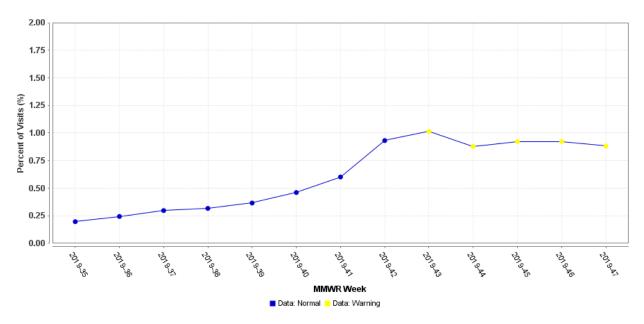

**Figure 2:** Delaware's regional baseline<sup>2</sup> for healthcare visits relating to ILI symptoms in the 2019-2020 Influenza Season is 1.9% and the national baseline<sup>3</sup> is 2.4%. In MMWR Week 47, the amount of ILI related visits reported by sentinel providers increased from 0.08% to 0.15%.

<sup>&</sup>lt;sup>1</sup>Five of twelve sentinel providers reported

<sup>&</sup>lt;sup>2</sup>The regional baseline is calculated by the CDC using non-influenza weeks from the previous three influenza seasons. Delaware is in Region 3, which also includes DC, MD, PA, VA, and WV.

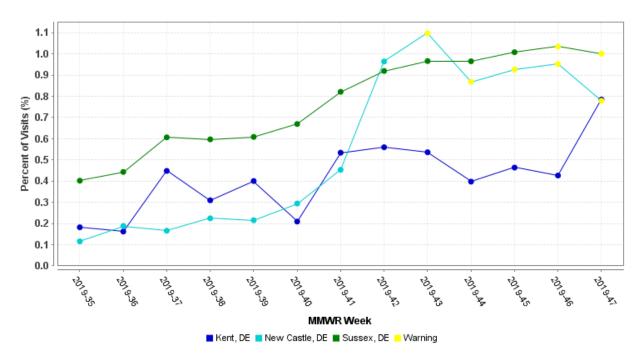

<sup>&</sup>lt;sup>3</sup>The National baseline is calculated by the CDC using non-influenza weeks from the previous three influenza seasons.

**NOTE:** Data provided do not reflect the total number of individuals who have been infected with the influenza virus in Delaware during the reporting period due to the following factors:

- Many people ill with influenza-like symptoms do not seek medical care.
- Many who do seek medical care are not tested for influenza.
- The Delaware Public Health Laboratory is limited by capacity to processing a maximum of three specimens per day from each reporting entity.

The Delaware Division of Public Health (DPH) is committed to serving you better by providing the most accurate, up-to-date influenza data available.
