

**INFECTION PREVENTION CHECKLIST
ONCOLOGY INFUSION CENTER**

Name: _____ Date: _____

Observer: _____

	Self Assessment		Pass	Fail	Re-Check
	Pass	Fail			
1. The facility provides supplies necessary for adherence to hand hygiene (e.g., soak, water, paper towels, alcohol-based hand rub) and ensures they are readily accessible to HCP patient care areas.					
2. HCP are educated regarding appropriate indications for hand washing with soap and water versus hand rubbing with alcohol-based hand rub.					
3. Upon interviewing, staff are knowledgeable about hand hygiene when working with patients with <i>C.Diff.</i> , Norovirus, Scabies or other infectious diseases. Note: Soap and water should be used when bare hands are visibly soiled (e.g., blood, body fluids) or after caring for a patient with known or suspected infectious diarrhea (e.g., <i>Clostridium difficile</i> or norovirus). In all other situations, alcohol-based hand rub may be used.					

For additional guidance on hand hygiene and resources for training and measurement of adherence consult the following resource(s):

Guideline for Hand Hygiene in Healthcare Settings available at:
