## **EXECUTIVE SUMMARY**

### **Introduction**

PRAMS, the Pregnancy Risk Assessment Monitoring System, is a comprehensive surveillance project conducted by both the Centers for Disease Control and Prevention (CDC) and state health departments. This survey collects state-specific, population-based data on maternal attitudes and experiences before, during, and shortly after pregnancy. PRAMS seeks to improve the health of mothers and infants by reducing adverse outcomes such as low birth weight, infant mortality and morbidity, and maternal morbidity. This report offers a detailed snapshot of Delaware's 2015 PRAMS data and should be considered as a resource for future maternal and child health project and policy initiatives. The survey year of 2015 is part of the Phase 7 survey cycle, which started in 2012.

### **Methods**

Delaware's 2015 PRAMS data was analyzed by using IBM SPSS, Microsoft Access, and Microsoft Excel. Out of 81 questions in the survey, 13 questions were omitted from analysis as they provided data specific to the respondent or were too complex to derive meaningful results. The remaining 68 questions were analyzed and, if necessary, adjusted so that all results were binary ("Yes" or "No"). The adjustments ultimately generated a total of 206 questions for analysis. The results for each of these questions were then stratified by five demographic categories – age of the respondent, race/ethnicity of the respondent, marital status of the respondent, whether or not the respondent had a previous live birth, and the educational status of the respondent. A set of chi-square tests was then performed to uncover whether any significant relationships existed among these five demographic categories. Finally, a weighted average scheme outlined by the CDC was implemented in order to apply the survey results to the entire 2015 Delaware PRAMS-eligible population.

It is essential to note that the denominators used to generate the percentages throughout this report are based on how the entire PRAMS-eligible population would have responded to the question. Therefore, the denominators - in total and stratified by age, race/ethnicity, marital status, prior live birth, educational attainment - were the same for every response presented in the report. These denominators are given in Table 6. This way of reporting differs from the method used by the CDC, in which the inclusion (or exclusion) criteria specific to each question are used to calculate the percentages. This inclusion (or exclusion) criteria are based on the flow of the questions and responses in the PRAMS survey. For example, in the PRAMS survey, if the respondent answers "No" to question 15 ("When you got pregnant with your new baby, were you trying to get pregnant?"), then the survey prompts the respondent to proceed to question 16 ("When you got pregnant with your new baby, were you or your husband or partner doing anything to keep from getting pregnant?"). If the respondent answers "Yes" to question 15, then the respondent is prompted to skip questions 16 and 17 and proceed to question 18. In this report, the entire PRAMS-eligible population (in total and stratified by the demographic categories listed above) was used for the denominators in the calculations to question 16, regardless of the response given by the respondent to question 15. However, in the method used by the CDC, only

those respondents who answered "No" to question 15 were included in the denominator calculation for question 16.

### **Results**

The age of the respondent was significantly associated with a respondent being married, having a previous live birth, and having higher educational status. In addition, White non-Hispanic respondents were generally more likely to be in older age groups, more likely to be married, and more likely to have more years of education completed as compared to both Black non-Hispanic and Hispanic respondents.

These differences among race/ethnicity categories permeated the overall results for the analysis of all questions. Compared to Black non-Hispanic women, White non-Hispanic women were more likely to report engaging in health promoting behaviors during the 12 months before becoming pregnant. Roughly one-eighth of Black non-Hispanic women did not want to be pregnant; this contrasts with approximately one-twentieth of White non-Hispanic women. A significantly higher percentage of White non-Hispanic women wanted to be pregnant sooner as compared to Black non-Hispanic women. Moreover, more than half of White non-Hispanic women tried to get pregnant at the time they became pregnant with their new baby as compared to a quarter of Black non-Hispanic women. In addition, White non-Hispanic women and women with a higher level of socioeconomic status (as compared to Black non-Hispanic women and women with a lower level of socioeconomic status) were more likely to report breastfeeding and laying their baby down on his or her back to sleep. However, generally speaking, the percentage of White non-Hispanic women consuming alcohol or using tobacco was higher than the percentage reported by Black non-Hispanic women and Hispanic women. As in previous PRAMS analyses, a high percentage of Hispanic women – about 1 in 8 – said that they did not have health insurance to help pay for prenatal care. Finally, a higher percentage of women at lower education levels and non-married women tended to report adverse social and economic support structures as compared to women at higher education levels and married women, respectively.

### **Conclusions**

Overall, women who were married and who had more years of education had a greater level of social support as compared to non-married women and women with fewer years of education, respectively. Compared to Black non-Hispanics, White non-Hispanics generally report having a higher health status before, during, and after pregnancy with the notable exceptions of alcohol and tobacco use. As in previous PRAMS analyses, although Black non-Hispanic women (as compared to White non-Hispanic women) were more likely to report *having a discussion* with a health care provider about health promoting behaviors, such as breastfeeding, a higher percentage of White non-Hispanic women were likely to report *engaging* in these health promoting behaviors as compared to Black non-Hispanic women. Generally speaking, these, as well as the other significant associations and contrasts, should be considered when designing and modifying programs and policies aimed at improving maternal and infant health. Finally,

although no direct comparisons are provided in this report, it is worth noting that the results in the 2015 PRAMS analysis tended to be more favorable across all socio-demographic categories as compared to the results in the 2012, 2013, and 2014 PRAMS analyses.

## **INTRODUCTION**

PRAMS, the Pregnancy Risk Assessment Monitoring System, is a surveillance project conducted by both the Centers for Disease Control and Prevention (CDC) and state health departments. PRAMS collects state-specific, population-based data on maternal attitudes and experiences before, during, and shortly after pregnancy. The goal of the PRAMS project is to improve the health of mothers and infants by reducing adverse outcomes such as low birth weight, infant mortality, and maternal morbidity.\*

PRAMS is essential for the following reasons:

- PRAMS allows the CDC and states to monitor changes in maternal and child health indicators (e.g., unintended pregnancy, prenatal care, smoking, drinking, infant health);
- PRAMS provides data for state health officials to use to improve the health of mothers and infants;
- PRAMS not only provides state-specific data but also allows comparisons among participating states because the same data collection methods are used in all states.\*

PRAMS provides valuable data not available from other sources about pregnancy and the first few months after birth. These data can be used to identify groups of women and infants at high risk for health problems, to monitor changes in health status, and to measure progress towards goals in improving the health of mothers and infants. PRAMS data can also be used by state agencies to identify other agencies that have important contributions to make in planning maternal and infant health programs and to develop partnerships with those agencies.\*

This report offers a comprehensive snapshot of Delaware's 2015 PRAMS data and should be considered as a resource for future maternal and child health project and policy initiatives.

## **METHODS**

The PRAMS sample of women who have had a recent live birth in 2015 were drawn from the state's birth certificate file. Each participating state samples between 1,300 and 3,400 women per year. Women from some groups are sampled at a higher rate to ensure adequate data are available in smaller but higher risk populations. In Delaware, low birthweight births are sampled at a higher rate. Selected women are first contacted by mail. If there is no response to repeated mailings, women are contacted and interviewed by telephone.\* In order to reduce response bias, the CDC has set a benchmark rate of 60% as the PRAMS survey response rate. In 2015, Delaware surveyed 1,506 women between two and four months postpartum who gave birth in that year and achieved an average response rate of 62.62% (943 women responding).

**Choosing & Retooling the Questions for Analysis**

PRAMS data was analyzed using IBM SPSS, Microsoft Access, and Microsoft Excel.

Of the 81 questions in the 2015 survey, questions that provided data specific to the respondent or were too complex to derive meaningful results were omitted (Table 1).

**Table 1. Questions Omitted from Analysis.**

Question	Reason for Omission from Analysis
1, 2, 3, 19, 20, 29, 47, 48, 55, 67, 80, and 81	Data Specific to Respondent
79	Too Complex to Derive Meaningful Results

Of the remaining 68 questions, 50 questions featured binary results (i.e., the respondent could only answer “Yes” or “No” to the question) while 18 questions offered multi-response results (i.e., the respondent could answer only one option out of at least three or more options presented). Several of the binary responses had several sub-questions or sub-conditions listed; for example, question 12 requested six different binary responses based on whether or not the respondent had the certain health condition listed. Each of these sub-questions or sub-conditions was analyzed separately, which ultimately brought the total number of binary questions examined from 50 to 187. To ease analysis and downstream comparisons, the 18 multi-response questions were retooled into binary responses as defined by Table 2.

**Table 2. Multi-Response Questions Redefined as Binary Indicator Variables.<sup>†</sup>**

	Response = “No”	Response = “Yes”	Response = “N/A” <sup>‡</sup>
<b>Q9</b>	1	2, 3, 4	
<b>Q26</b>	1	2	3
<b>Q37</b>	4, 5, 6	1, 2, 3	7
<b>Q38</b>	6	1, 2, 3, 4, 5	7
<b>Q39</b>	4, 5, 6	1, 2, 3	7
<b>Q40</b>	1	2, 3	
<b>Q42</b>	4, 5, 6	1, 2, 3	7
<b>Q43</b>	6	1, 2, 3, 4, 5	7
<b>Q49</b>	1	2	3
<b>Q50</b>	1, 2	3, 4, 5, 7	6
<b>Q56</b>	1, 3	2	
<b>Q57</b>	3, 4, 5	1, 2	
<b>Q58</b>	1	2	3
<b>Q64</b>	3, 4, 5	1, 2	
<b>Q65</b>	3, 4, 5	1, 2	
<b>Q70</b>	Segmented into two questions.		
<b>Q72</b>	1	2, 3, 4	
<b>Q73</b>	1	2, 3, 4	

<sup>†</sup> Note that “1” refers to the first answer listed that a respondent can choose, “2” refers to the second answer, etc.

<sup>‡</sup> “N/A” responses refer to responses that cannot be categorized in a binary manner.

These 18 multi-response questions resulted in 19 additional binary questions, which brought the total number of questions under investigation to 206.

Finally, note that this analysis makes use of “non-RAW” variables. Of the 206 questions investigated, 87 comprised variables that were transformed by the CDC from “RAW” to “non-RAW”. Graphs of the 87 “RAW” variables are presented in Appendix A (pages 157 to 200) and the corresponding tables of the 87 “RAW” variables are given in Appendix B (pages 201 to 208). The results, graphs, and tables of the “non-RAW” variables are featured with the other variables (questions) in the body of this report.

**Choosing Demographic Categories for Analysis**

Five different demographic categories were chosen (“Age”, “Ethnicity”, “Married” [Marital Status], “Previous Live Birth”, and “Education”). These categories were then divided into subcategories (e.g., “12 Years” for “Education”) and the number of actual respondents for each subcategory was compared to the total number of possible respondents as given in Table 3.

**Table 3. Response Rates by Demographic Category, Delaware 2015 PRAMS.**

<b>Total</b>		<b>Respondents</b>	<b>Total</b>	<b>Percent Response</b>
		943	1,506	62.62%
<b>Age</b>	Under 20 Years	35	70	50.00%
	20-24 Years	169	315	53.65%
	25-34 Years	576	889	64.79%
	Over 34 Years	163	232	70.26%
	<i>Total</i>	943	1,506	62.62%
<b>Ethnicity</b>	White Non-Hispanics	527	776	67.91%
	Black Non-Hispanics	228	437	52.17%
	Hispanic	142	226	62.83%
	<i>Total</i> <sup>§</sup>	897	1,439	62.33%
<b>Married</b>	Married	530	760	69.74%
	Not Married	413	744	55.51%
	<i>Total</i>	943	1,504	62.70%
<b>Previous Live Birth</b>	Yes	578	901	64.15%
	No	365	605	60.33%
	<i>Total</i>	943	1,506	62.62%
<b>Education</b>	Less Than 12 Years	151	258	58.53%
	12 Years	230	404	56.93%
	Greater Than 12 Years	554	835	66.35%
	<i>Total</i> **	935	1,497	62.46%

<sup>§</sup> The “Ethnicity” totals were lower since only White non-Hispanics, Black non-Hispanics, and Hispanics were included. The number of respondents not in any one of these three categories was 46 (4.88%).

\*\* The “Education” totals were lower since this data was not available for eight (0.85%) respondents and nine (0.60%) individuals in the survey population.

A cross-table of the demographic category was created (Table 4) and  $\chi^2$  tests were performed (Table 5) to assess whether a significant relationship ( $\alpha = 0.05$ ) exists between categories. Note that all cells were included in the statistical analysis regardless of count size, and therefore, caution should be exercised when interpreting results for analyses that include cell counts of less than five.

Not surprisingly, “Age” was significantly associated with “Married”, “Previous Live Birth”, and “Education” while “Married” was significantly associated with “Education”. In this population, significant associations occurred between “Ethnicity: Hispanic/White NH” and all other demographic categories. In addition, significant associations also took place between “Ethnicity: Black NH/White NH” and all other demographic categories except for “Previous Birth”. Based on the data and these results, White non-Hispanic respondents were generally more likely to be in older age groups, more likely to be married, and more likely to have more years of education completed as compared to both Black non-Hispanic and Hispanic respondents.

### **Putting the Questions & Demographic Categories Together for Analysis**

To calculate results, an approach that would report what percentage of Delaware’s *entire* 2015 PRAMS-eligible population would respond “Yes” to each question was implemented. To achieve this, a weighted average scheme designed by the CDC was applied to the dataset.<sup>††</sup> This weighted average methodology involved performing the following steps for each of the 206 binary questions and for each of the five demographic categories (“Age”, “Ethnicity”, “Married”, “Previous Live Birth”, and “Education”):

1. List only the respondents who answered “Yes” to the question.
2. Add the designated weighted averages (field *wtanal* in the 2015 PRAMS dataset) for each of the respondents from step 1.
3. Divide the sum of the weighted averages from step 2 by the Delaware PRAMS-eligible population in that specific demographic category. The Delaware PRAMS-eligible population in each specific category is given in Table 6 on page 24.
4. Convert the fraction calculated in step 3 into a percentage. This is the weighted average response to the question (for each demographic category).

---

**Table 4. Cross-Table of Respondents by Demographic Categories, Delaware 2015 PRAMS.**

		Total	Ethnicity			Married		Previous Live Birth		Education		
			White Non-Hispanic	Black Non-Hispanic	Hispanic	Married	Not Married	Yes	No	Less Than 12 Years	12 Years	Greater Than 12 Years
Age	Under 20 Years	35	9	13	11	1	34	9	26	22	9	3
	20-24 Years	169	82	55	30	46	123	81	88	39	62	66
	25-34 Years	576	339	126	78	365	211	371	205	62	137	373
	Over 34 Years	163	97	34	23	118	45	117	46	28	22	112
Ethnicity	White Non-Hispanic	527				357	170	317	210	43	114	365
	Black Non-Hispanic	228				73	155	140	88	36	68	123
	Hispanic	142				58	84	104	38	69	43	28
Married	Married	530						335	195	51	82	393
	Not Married	413						243	170	100	148	161
Previous Live Birth	Yes	578								117	149	308
	No	365								34	81	246
Education	Less Than 12 Years	151										
	12 Years	230										
	Greater Than 12	554										

**Table 5.  $\chi^2$  of Demographic Category Comparisons, Delaware 2015 PRAMS.** Significant (*S*) and non-significant (*N/S*)  $\chi^2$  values are indicated ( $\alpha = 0.05$ ).

	Black NH	Hispanic	Married	Previous Live Birth	Education
Age	18.39 <sup>††</sup> ( <i>S</i> )	17.60 <sup>††</sup> ( <i>S</i> )	127.51 ( <i>S</i> )	41.31 ( <i>S</i> )	115.58 ( <i>S</i> )
Ethnicity: Black NH			82.85 <sup>††</sup> ( <i>S</i> )	0.10 <sup>††</sup> ( <i>N/S</i> )	19.02 <sup>††</sup> ( <i>S</i> )
Ethnicity: Hispanic			34.36 <sup>††</sup> ( <i>S</i> )	8.21 <sup>††</sup> ( <i>S</i> )	159.96 <sup>††</sup> ( <i>S</i> )
Married					119.22 ( <i>S</i> )
Previous Live Birth					25.46 ( <i>S</i> )

†† The  $\chi^2$  results are the comparisons of either Black non-Hispanics or Hispanics and White non-Hispanics to a different demographic category.

**Table 6. PRAMS-Eligible Population Used in Weighted Average Scheme, Delaware 2015 PRAMS.**

		Population of Births	Percent Response
<b>Total</b>		10,423	N/A
<b>Age</b>	Under 20 Years	426	4.08%
	20-24 Years	2,036	19.54%
	25-34 Years	6,382	61.23%
	Over 34 Years	1,579	15.14%
<b>Ethnicity</b>	White NH	5,745	57.65%
	Black NH	2,638	26.48%
	Hispanic	1,581	15.87%
<b>Married</b>	Married	5,636	54.07%
	Not Married	4,787	45.93%
<b>Previous Live Birth</b>	Yes	6,388	61.29%
	No	4,035	38.71%
<b>Education</b>	Less Than 12 Years	1,676	16.19%
	12 Years	2,564	24.77%
	Greater Than 12 Years	6,113	59.05%

Note that some minor differences in the results may be reported here as compared to other sources. Skips and missing responses that can cause slight differences in results may be included or excluded in base calculations. For this report, they were included as a first step in PRAMS analysis. Overall, these minor differences do not change the overall discussion of the report.

For each weighted average response, a bar graph was constructed with 95% confidence intervals added. A graph for each response is given from pages 35 to 137. The 95% confidence intervals are denoted as the thin black lines spread across the end of each bar in the graph. The tables on pages 138 to 156 detail the exact percentage of “Yes” responses and the exact lower and upper bound 95% confidence intervals.

**RESULTS**

The following are the notable results for the weighted averages among each demographic subcategory based on careful examination of the graphs and tables. In this report, a result was considered to be statistically significant if the 95 percent confidence intervals for the percent response “Yes” for one or more of the demographic subcategories within a demographic category did not overlap one another. For example, in the results for Q4 (shown in the figure on page 35 and provided in the table on page 137), the 95 percent confidence interval for the percent of White non-Hispanics responding “Yes” (57.18%) did not overlap the 95 percent confidence interval for the percent of Black non-Hispanics responding “Yes” (61.71%). Accordingly, the difference in the average percentage of individuals in these two demographic subcategories responding “Yes” was considered statistically significant. In addition, concerns regarding small

cell counts were mitigated given the relatively large sample sizes of the denominators for each demographic subcategory (Table 3). Note also that a weighted average scheme was used to generate these results, and therefore, these results reflect the entire 2015 PRAMS-eligible population in Delaware. Finally, the results presented here center on racial and ethnic disparities in health outcomes, behaviors, and access, all of which are of particular interest to the State of Delaware and relevant stakeholders.

## **Pregnancy Intention & Becoming Pregnant**

### **Pregnancy Intention**

A significantly higher percentage of White non-Hispanics (15.37%) wanted to be pregnant *sooner* as compared to Black non-Hispanics (5.90%) and Hispanics (9.13%) as shown in the results to Q13B. As indicated in Q13A, however, a significantly lower percentage of White non-Hispanics (20.35%) wanted to be pregnant *later* as compared to Black non-Hispanics (28.50%) or Hispanics (29.14%). In addition, 4.17% of White non-Hispanics and 6.24% of Hispanics did not want to be pregnant; this contrasts with roughly one-eighth (12.03%) of Black non-Hispanics who did not (Q13D). Furthermore, as given in Q15, a significantly higher percentage of White non-Hispanics (56.81%) tried to get pregnant at the time they became pregnant with their new baby, which was significantly higher than both Black non-Hispanics (28.27%) and Hispanics (38.40%). This also was the case for married women (63.49%) compared with non-married women (27.77%) and for older women and women with more years of education.

Moreover, 16.07% of White non-Hispanics stated that they or their husband or partner were doing something to keep from getting pregnant (Q16); this was significantly lower than the corresponding percentages for Black non-Hispanics (34.02%) and Hispanics (26.11%). Furthermore, a significantly higher percentage of women under age 20 years (3.58%) had problems getting birth control when they needed it as a reason to not do anything to keep from getting pregnant (Q17D) as compared with older age groups (0.91% of women 25 to 34 years of age and 0.00% of women over 34 years of age). As presented in Q17F, a significantly higher percentage of Black non-Hispanics (8.77%) as compared with White non-Hispanics (4.48%) and with Hispanics (3.74%) responded that their husband or partner did not want to use anything (e.g., contraception) as a reason to not do anything to keep from getting pregnant. Similar results were reported among women with less education completed as compared with women with more education.

### **Becoming Pregnant**

When asked if they had taken any fertility drugs or received any medical procedures from a doctor, nurse, or health care worker to help them become pregnant with their new baby (Q18), a higher percentage of White non-Hispanics (5.48%) said “Yes” as compared with Black non-Hispanics (3.53%) and Hispanics (3.15%). Similar findings were apparent among married women (7.81%) as compared with non-married women (0.51%), older women (4.98% of women between 25 and 34 years of age and 6.85% of women over 34 years of age) as compared with

younger women (1.12% of women between 20 and 24 years of age), and women with more years of education (6.97% of women with over 12 years of education) as compared with women with fewer years of education (0.59% of women with 12 years of education).

Finally, a significantly higher percentage of White non-Hispanics (77.27%) and Hispanics (68.11%) reported being happy or very happy to be pregnant when they found out they were pregnant with their new baby as compared to Black non-Hispanics (54.82%) as given in Q70B. Compared with non-married women, women with lower levels of educational attainment, and women in lower age groups, a higher percentage of women that were married, with higher levels of educational attainment, and in older age groups also reported being happy or very happy to be pregnant when they found out they were pregnant with their new baby.

## **Prenatal Care**

### **Starting Prenatal Care**

A significantly higher percentage of White non-Hispanic women (85.17%) compared to Black non-Hispanic women (78.26%) and Hispanic women (76.84%) stated that they received prenatal care as early in their pregnancy as they wanted (Q21). For the same question, the percentages reported among women who were married, who had higher levels of educational attainment, and who were in older age groups were significantly higher as compared to women who were not married, who had lower levels of educational attainment, and who were in younger age groups.

### **Access to Prenatal Care**

A substantially higher percentage of Hispanic women (7.57%) compared to non-Hispanic women claimed that they did not have enough money or insurance to pay for prenatal care visits (Q22B). In addition, a higher percentage of Black non-Hispanic (3.40%) and Hispanic women (3.01%) compared to White non-Hispanic women (1.30%) responded that they had no way to get to the clinic or doctor's office (Q22C). As compared to women in older age ranges, a higher percentage of women under age 20 years said that they didn't know they were pregnant (Q22I) or didn't want anyone else to know they were pregnant (Q22J) as a reason for why they could not get prenatal care at all or as early as they wanted. Finally, a higher percentage of Hispanics (0.74%) when compared with White non-Hispanics (0.00%) and Black non-Hispanics (0.00%) reported that they didn't want prenatal care as a reason for why they didn't get prenatal care at all or as early as they would have wanted (Q22K).

### **During Prenatal Care Visits**

A significantly lower percentage of White non-Hispanics (82.63%) as compared to Black non-Hispanics (91.42%) claimed that a doctor, nurse, or other health care worker talked with them during prenatal care visits about breastfeeding their baby (Q24C). Overall, compared to White non-Hispanic women, a higher percentage of Black non-Hispanic women answered "Yes" when asked whether or not a health care provider discussed the following: how much weight you should gain during your pregnancy (Q24A), how smoking during pregnancy could affect your

baby (Q24B), how drinking alcohol during pregnancy could affect your baby (Q24D), seat belt use during pregnancy (Q24E), about medicines that are safe to take during your pregnancy (Q24F), how using illegal drugs could affect their baby (Q24G), the signs and symptoms of preterm labor (Q24I), getting tested for HIV (Q24J), what to do if feeling depressed during pregnancy or after the baby is born (Q24K), and physical abuse to women by their husbands or partners (Q24L). However, a fairly high and comparable percentage of White non-Hispanic women (88.23%) and Black non-Hispanic women (81.49%) said that a doctor, nurse, or other health care worker talked with them about doing tests to screen for birth defects or diseases that run in their family (Q24H).

Generally speaking, a relatively high percentage of women overall were satisfied with aspects of their prenatal care. As presented in Q25A, an estimated 78.16% of the PRAMS-eligible population stated that they were satisfied during their prenatal care with the amount of time they had to wait after they arrived for their visits. Likewise, 84.18% of women said that they were satisfied with the amount of time the doctor, nurse, or midwife spent with them during their visits (Q25B) and 88.28% were satisfied during their prenatal care with the advice they received on how to take care of themselves (Q25C). Finally, 91.37% were satisfied with the understanding and respect that the staff showed toward them as a person (Q25D); for this question, the percentages were comparable among White non-Hispanic respondents (92.17%), Black non-Hispanic respondents (91.69%), and Hispanic (89.74%) respondents.

### **Infant Care**

Approximately one-fifth (22.00%) of Black non-Hispanic women stated that a home visitor came to their home to help them learn about how to take care of themselves or their new baby after their new baby was born (Q59). This was significantly higher than the reported percentages of White non-Hispanics (15.98%) and Hispanics (17.24%).

### **Breastfeeding**

A higher percentage of White non-Hispanics (84.16%) and Hispanics (89.03%) reported breastfeeding or pumping breast milk to feed their new baby after delivery as compared to Black non-Hispanics (82.30%) as indicated in the results to Q53. Overall, a higher percentage of women with more education, that were married, or were in older age groups stated that they breastfed or pumped breast milk to feed their new baby after delivery as compared to women with fewer years of education, that were non-married, or were in lower age groups. Similar results took place for all demographic groups when women were asked whether they were still breastfeeding or feeding pumped milk to their new baby (Q54). In fact, only 39.12% of Black non-Hispanic women stated that they were currently breastfeeding or feeding pumped milk to their new baby as compared to 55.80% of White non-Hispanic women and 56.11% of Hispanic women.

### SIDS Prevention

A significantly higher percentage of White non-Hispanics (85.58%) and Hispanics (77.46%) compared to Black non-Hispanics (65.91%) reported laying their baby down on his or her back when they sleep (Q56). Compared with non-married women and women with fewer years of education, married women and women with more years of education were more likely to lay their baby down on his or her back to sleep as well. Moreover, a significantly lower percentage of White non-Hispanics (14.91%) and Hispanics (16.30%) reported that their baby always or often sleeps in the same bed/crib with them or anyone else as compared to Black non-Hispanics (24.39%) as indicated in Q57.

### Infant Survival

As given in Q51, when women were asked whether or not their baby was alive at the time of the survey, a significantly higher percentage of White non-Hispanic women (97.92%) responded “Yes” as compared to Black non-Hispanic women (95.79%). Moreover, as given in Q52, a significantly higher percentage of White non-Hispanic women (96.84%) claimed that their baby was living with them now as compared to Hispanic women (93.76%).

### Alcohol & Tobacco Use

#### Alcohol Use

A significantly higher percentage of White non-Hispanics (76.97%) stated that they had consumed at least one alcoholic drink in the past two years (Q41) as compared to Black non-Hispanics (53.12%), with Hispanics having the lowest percentage of alcoholic drink consumption (41.00%). As given in Q42, the percentage of White non-Hispanics claiming alcohol use and binge alcohol consumption in the three months prior to becoming pregnant was significantly higher than the percentage reported by Black non-Hispanics and Hispanics.

#### Tobacco Use

Compared to Black non-Hispanics (21.74%) and Hispanics (13.89%), a significantly higher percentage of White non-Hispanics (26.89%) stated that they smoked in the past two years (Q36). When asked whether or not they smoked in the past two years, the percentage of non-married women responding “Yes” (34.99%) was almost triple that of married women (12.11%).

In addition, the percentage of White non-Hispanics saying that they smoked at least 11 cigarettes on average each day in the three months before becoming pregnant was also almost triple the percentage reported by Black non-Hispanic women (10.50% compared to 4.21%) as indicated in Q37. As given in Q37, Q38, and Q39, non-married women and women with fewer years of education were more likely to smoke than married women and women with more years of education completed.

## **Health Care Utilization**

### **HIV Testing**

As presented in Q26, a significantly higher percentage of Black non-Hispanic women (78.41%) stated that they had a test for HIV at least once during their most recent pregnancy or delivery as compared to White non-Hispanic women (53.87%) or Hispanic women (69.94%). Similar results occurred between non-married women (70.10%) compared to married women (56.95%).

### **Flu Shots**

Approximately three out of four women (76.75%) of women reported that a doctor, nurse, or other health care worker offered them a flu shot or told them to get one during the 12 months before delivery of their new baby (Q27).

### **Childbirth Classes**

A higher percentage of married women (19.96%) stated that they took childbirth classes as compared to non-married women (13.31%) and women with more years of education generally reported taking childbirth classes compared with women with fewer years of education (Q31).

### **Dentist Visits**

As indicated in Q30A, 86.16% stated that they knew it was important to care for their teeth and gums during pregnancy (Q30A). Furthermore, approximately half (46.16%) said that a dental or other health care worker talked with them about how to care for their teeth and gums (Q30B). For these two questions, the percentages reported by race/ethnicity, age, marital status, and educational attainment were roughly the same. However, as indicated in Q30C, a significantly higher percentage of White non-Hispanics (51.14%) claimed that they had their teeth cleaned by a dentist or dental hygienist during their most recent pregnancy as compared to Black non-Hispanics (36.34%) or Hispanics (33.06%). Moreover, as shown in Q30D, 61.59% of White non-Hispanics had insurance to cover dental care during their pregnancy, which was higher than Black non-Hispanics (56.87%) and Hispanics (39.13%). Finally, a significantly higher percentage of Black non-Hispanics (25.67%) needed to see a dentist for a problem, as compared to 18.77% of White non-Hispanics (Q30E). However, the percentage of Black non-Hispanics who reported *actually* going to a dentist or dental clinic about a problem was comparable to both White non-Hispanics and Hispanics (Q30F).

## **Health Status**

### **Before Becoming Pregnant**

Overall, White non-Hispanic women as compared to Black non-Hispanic women were more likely to report engaging in health promoting behaviors during the 12 months before becoming pregnant. According to Q7B, 51.60% of White non-Hispanic women stated that they were exercising 3 or more days of the week; this contrasts with 36.10% of Black non-Hispanic women and 41.90% of Hispanic women. In Q7H, a higher percentage of White non-Hispanic women (60.02%) as compared to Black non-Hispanic women (47.94%) and Hispanic women (35.70%) reported that they had their teeth cleaned by a dentist or dental hygienist during the 12 months

before they got pregnant. The results were mixed for health care checkups and treatments in the 12 months prior to becoming pregnant; a higher percentage of White non-Hispanic women compared to Black non-Hispanic women reported regular use of prescription medicines other than birth control (Q7C) while a significantly higher percentage of Black non-Hispanic women compared to White non-Hispanic women reported being checked or treated for diabetes (Q7D) and high blood pressure (Q7E).

As provided in Q9, about half (50.45%) of White non-Hispanic women stated that they took a multivitamin or prenatal vitamin at least once a week during the month before they became pregnant with their new baby. This percentage was significantly higher than that reported by Black non-Hispanic women (35.61%) and Hispanic women (36.47%).

Furthermore, the race/ethnicity categories differed in the reported presence of adverse health conditions before getting pregnant (Q11A-C) or in the three months before becoming pregnant (Q12A-F). In Q12A, 21.11% of Black non-Hispanics stated they had asthma as compared to 9.61% of White non-Hispanics and 10.52% of Hispanics. Similar disparities, in which the percentages reported by Black non-Hispanics were higher than White non-Hispanics and Hispanics, were apparent for high blood pressure or hypertension (Q11B) and anemia (Q12B). Conversely, a higher percentage of White non-Hispanic women reported having anxiety (Q12F) as compared to Black non-Hispanic and Hispanic women.

#### During Most Recent Pregnancy

In Q34, 8.30% of White non-Hispanic women and 11.72% of Black non-Hispanic women reported that a doctor, nurse, or other health care worker told them that they had gestational diabetes; these percentages were lower than the percentage reported by Hispanic women (14.72%). A markedly high percentage (25.50%) of Black non-Hispanic women stated that they had a problem with severe nausea, vomiting, or dehydration during their most recent pregnancy; this contrasts with only 17.42% of White non-Hispanic women and 19.99% of Hispanic women (Q35C). Compared to White non-Hispanic women and Hispanic women, a significantly higher percentage of Black non-Hispanic women also had a problem with labor pains more than 3 weeks before their baby was due (Q35G).

A higher percentage of Black non-Hispanic women (3.40%) as compared to White non-Hispanic women (1.39%) and Hispanic women (2.66%) stated that their husband or partner pushed, hit, slapped, kicked, or physically hurt them during their most recent pregnancy (Q46).

As presented in Q74C, a significantly higher percentage of Black non-Hispanics reported having Chlamydia (6.17%) during their pregnancy as compared to White non-Hispanics (2.26%) and Hispanics (3.83%). In Q74H, a significantly higher percentage of Black non-Hispanic women (12.01%) also stated that they had bacterial vaginosis during their pregnancy as compared to White non-Hispanic women (2.83%) and Hispanic women (2.72%).

### Postpartum Depression

A significantly higher percentage of non-married women (10.42%) stated that they always or often felt down, depressed, or sad since their new baby was born as compared with married women (6.08%) as given in Q64. Similar results were reported in Q65, in which respondents were asked if they have always or often felt little interest or little pleasure in doing things since their new baby was born.

### Health Coverage

#### Before Becoming Pregnant

The race/ethnicity groups differed in their self-reported health insurance status prior to becoming pregnant. Compared to Black non-Hispanic (36.59%) and Hispanic (17.78%) women, a significantly higher percentage of White non-Hispanic women (61.50%) stated that they were covered by private insurance during the month before getting pregnant with their new baby (Q8A). Conversely, the percentage of Black non-Hispanic women who were covered by Medicaid during the month before they got pregnant with their new baby was more than double that of White non-Hispanic women (Black non-Hispanic: 55.65%; White non-Hispanic: 23.03%) as presented in Q8C. Finally, compared to the other two race/ethnicity groups, a relatively high percentage of Hispanic women (21.50%) stated that they were covered by CHAP (Community Healthcare Access Program) during the month before they got pregnant with their new baby (Q8E); furthermore, a high percentage of Hispanic women (24.64%) claimed that they did not have any health insurance during the month before they became pregnant (Q8G).

#### Prenatal Care Payer

A significantly higher percentage of Black non-Hispanic women (60.88%) said Medicaid paid for at least part of their prenatal care as compared to Hispanic women (52.56%) and White non-Hispanic women (30.79%) as indicated in Q23C. Similar results occurred for younger women (71.79% of women under 20 years of age) as compared to older women (28.06% of women over 34 years of age), non-married women (66.54%) compared to married women (20.09%), and women with fewer years of education compared to women with more years of education completed. For women saying that health insurance from a job or the job of a husband, partner, or parents paid for at least part of their prenatal care, the converse of the Q23C results generally took place at each demographic category as shown in Q23A. Compared to the other race/ethnicity groups, a relatively high percentage of Hispanic respondents said that the Community Healthcare Access Program (Q23E: 24.81%) helped pay for their prenatal care. As given in Q23G, a relatively high percentage of Hispanic women (12.31%) said that they did not have health insurance to help pay for prenatal care.

#### During Most Recent Pregnancy

During their most recent pregnancy, a significantly higher percentage of younger women claimed to be on WIC (the Special Supplemental Nutrition Program for Women, Infants, and Children) as compared to older women (Q33). Similar results were reported among women with

fewer years of education (73.84% of women less than 12 years of education and 66.71% of women with 12 years of education) compared with women with more years of education (23.62% of women with over 12 years of education) and non-married women (67.70%) compared with married women (21.19%). A significantly higher percentage of Hispanic women (77.40%) were on WIC compared to Black non-Hispanics (62.08%), and in corresponding manner, a significantly lower percentage of White non-Hispanics (25.63%). Finally, as given in Q75A, a significantly higher percentage of Black non-Hispanics (69.74%) and Hispanics (77.85%) compared to White non-Hispanics (33.19%) reported that they were on food stamps, WIC vouchers, or received money to buy food during their most recent pregnancy.

#### During Delivery and Well-Baby Checkups

As provided in Q66C, a significantly higher percentage of Black non-Hispanics (60.42%) stated that Medicaid is currently their health insurance as compared to White non-Hispanics (29.22%) and Hispanics (38.38%). Similar results occurred for non-married women (64.82%) compared to married women (15.78%) and younger age groups (71.79% of women under 20 years of age and 63.77% of women ages 20 to 24) compared to older age groups (31.86% of women ages 25 to 34 years and 22.47% of women over 34 years of age). The converse of these results was generally reported for each of the demographic categories when women were asked whether health insurance from a job or the job of a husband, partner, or parents (Q66A) is currently their health insurance. Compared to the other two race/ethnicity groups, a relatively high percentage of Hispanic respondents said that the Community Healthcare Access Program (Q66E: 22.15%) is their current form of health insurance. Finally, an estimated one in five Hispanic women were reported as not having health insurance now (Q66G).

Across all socio-demographic categories assessed, approximately 7 out of 8 women reported having had a postpartum checkup since their new baby was born (Q63).

#### Social Support

A significantly higher percentage of White non-Hispanics (25.11%) and Black non-Hispanics (21.81%) claimed to have a close family member who was very sick and had to go to the hospital during the 12 months before their new baby was born as compared to Hispanics (10.24%) as given in Q44A. In addition, as shown in Q44B, a higher percentage of Black non-Hispanics (10.43%) as compared to White non-Hispanics (6.44%) and Hispanics (9.24%) stated that they became separated or divorced from their husband or partner during the 12 months before their new baby was born. A significantly higher percentage of Black non-Hispanic women (33.36%) as compared to White non-Hispanic women (17.75%) and Hispanic women (22.28%) stated that they had argued with their husband or partner more than usual during the 12 months before their baby was born (Q44I). Furthermore, as provided by Q44J, the percentage of Black non-Hispanic women who stated that their husband or partner said that they didn't want them to be pregnant (14.18%) was more than double that of White non-Hispanics (4.60%). Finally, as shown in Q76A, a significantly higher percentage of White non-Hispanics (80.60%) compared to Black

non-Hispanics (66.84%) or Hispanics (63.54%) stated that they would know someone who could loan them \$50 if they needed it.

According to Q44D, 3.35% of Black non-Hispanic women reported that they were homeless during the 12 months before their new baby was born; this contrasts with 1.44% of White non-Hispanic women. Overall, a higher percentage of women at lower education levels and non-married women tended to report adverse social and economic support structures as compared to women at higher education levels and married women, respectively (Q44A-N and Q76A-D).

## **DISCUSSION**

As consistently evidenced by the Results and alluded to in the Methods section, the percentage responses for each of the questions are significantly different when stratified by demographic categories. Overall, women who were in older age groups, who were married, and who had more years of education had a higher socioeconomic status (based on the indicators in the “Health Coverage” and “Social Support” sections of the Results) and health status (based on the measures in the “Health Status” section of the Results). According to the “Health Status” section of the Results, White non-Hispanics were frequently in significantly better health than Black non-Hispanics and Hispanics.

Generally speaking, the results from the 2015 PRAMS analysis echo the results from the 2008, 2009, 2010, and especially, the 2011, 2012, 2013, and 2014 PRAMS analyses. Black non-Hispanics and non-married women generally reported greater utilization of HIV testing and said that a health care provider discussed seat belt use and the risks of alcohol, smoking, and illicit drug use during pregnancy; these results may indicate success in the targeted interventions already in place throughout Delaware. On the other hand, compared to the other race/ethnicity categories, Hispanic women have been less likely to have health insurance throughout the perinatal period (see “Prenatal Care” and “Health Coverage” sections of the Results). Future maternal and child health programs should take this growing ethnic population into greater consideration.

Like previous PRAMS analyses, some noteworthy discrepancies were uncovered in this analysis. As in prior years, although a significantly higher percentage of Black non-Hispanics reported that a health care provider discussed breastfeeding their baby in comparison to White non-Hispanics, a significantly higher percentage of White non-Hispanics reported breastfeeding or pumping breast milk to feed their new baby after delivery as compared to Black non-Hispanics (see “Infant Care” and “Prenatal Care” sections of the Results). This difference in prenatal discussion and infant care practice may be a result of several different factors and should further be examined. In addition, the general lack of consistent statistical differences between women with no Previous Live Birth and a Previous Live Birth may suggest that women do not

necessarily change their behavior with the increased knowledge and experience acquired during a prior pregnancy.

Besides serving as a standardized and widely-used survey, one of the most potent features of the PRAMS survey is that it offers maternal and child health officials a window into the self-reported thoughts and behaviors of perinatal women. Moreover, PRAMS allows researchers to examine whether differences in these thoughts and behaviors exist among various socio-demographic cohorts. For example, in this analysis, about half of Black non-Hispanic women reported being happy or very happy when they found out they were pregnant; this contrasts with three out of every four White non-Hispanic women. This result, combined with the reported disparities in socioeconomic supports between Black non-Hispanic and White non-Hispanic women, have been linked to the diverging perinatal outcomes between these two race/ethnicity categories. Overall, these differences in socio-demographic categories should be considered when tailoring programs and policies aimed at improving maternal and infant health at the state level.

Finally, although no direct comparisons are provided in this report, it is essential to note that the results in the 2015 PRAMS analysis tended to be more encouraging across all socio-demographic categories as compared to the results in the previous PRAMS analyses. This may suggest that maternal and infant health initiatives within the State of Delaware are demonstrating an effect on improving self-reported behaviors and outcomes.

**GRAPHS**

**Q4: Before you got pregnant, did you have any other babies who were born alive?§§,\*\*\* (% “Yes”)**

**Q5: Did the baby born just before your new one weigh less than 5 pounds, 8 ounces (2.5 kg) at birth?§§,\*\*\* (% “Yes”)**

§§ For this question, “Prior Live Birth” was assigned a response of “N/A” as comparisons in this category are not plausible.

\*\*\* Indicates that at least one cell count used as a numerator for a percentage in this graph or table is less than 30.

**Q6: Was the baby just before your new one born earlier than 3 weeks before his or her due date?<sup>§§,\*\*\*</sup> (% “Yes”)**

**Q7A: At any time during the 12 months before you got pregnant with your new baby, were you dieting (changing eating habits) to lose weight?<sup>\*\*\*</sup> (% “Yes”)**

**Q7B: At any time during the 12 months before you got pregnant with your new baby, were you exercising 3 or more days of the week? \*\*\* (% “Yes”)**

**Q7C: At any time during the 12 months before you got pregnant with your new baby, were you regularly taking prescription medicines other than birth control? (% “Yes”)**

**Q7D: At any time during the 12 months before you got pregnant with your new baby, did you visit a health care worker to be checked for diabetes?\*\*\* (% “Yes”)**

**Q7E: At any time during the 12 months before you got pregnant with your new baby, did you visit a health care worker to be checked for high blood pressure?\*\*\* (% “Yes”)**

**Q7F: At any time during the 12 months before you got pregnant with your new baby, did you visit a health care worker to be checked for depression or anxiety?\*\*\* (% “Yes”)**

**Q7G: At any time during the 12 months before you got pregnant with your new baby, did you talk with a health care worker about your family medical history?\*\*\* (% “Yes”)**

**Q7H: At any time during the 12 months before you got pregnant with your new baby, did you have your teeth cleaned by a dentist or dental hygienist?\*\*\* (“Yes”)**

**Q8A: During the month before you got pregnant with your new baby, were you covered by private health insurance from your job or the job of your husband, partner, or parents?\*\*\* (% “Yes”)**

**Q8B: During the month before you got pregnant with your new baby, were you covered by private health insurance purchased directly from an insurance company? (% “Yes”)**

**Q8C: During the month before you got pregnant with your new baby, were you covered by Medicaid (Diamond State Partners, Unison, or Delaware Physicians Care)?\*\*\* (% “Yes”)**

**Q8D: During the month before you got pregnant with your new baby, were you covered by the Delaware Healthy Children Program (DHCP/SCHIP)? (% “Yes”)**

**Q8E: During the month before you got pregnant with your new baby, were you covered by CHAP – Community Healthcare Access Program? (% “Yes”)**

**Q8F: During the month before you got pregnant with your new baby, were you covered by TRICARE or other military health care? (% “Yes”)**

**Q8G: I did not have any health insurance during the month before I got pregnant. (% “Yes”)**

**Q9: During the month before you got pregnant with your new baby, did you take a multivitamin or a prenatal vitamin at least once a week?\*\*\* (% “Yes”)**

**Q10: Before you got pregnant with your new baby, did a doctor, nurse, or other health care worker talk to you about how to improve your health before pregnancy?\*\*\* (% “Yes”)**

**Q11A: Before you got pregnant with your new baby, were you ever told by a doctor, nurse, or other health care worker that you had Type 1 or Type 2 diabetes (not the same as gestational diabetes or diabetes that starts during pregnancy)? (% “Yes”)**

**Q11B: Before you got pregnant with your new baby, were you ever told by a doctor, nurse, or other health care worker that you had high blood pressure or hypertension? (% “Yes”)**

**Q11C: Before you got pregnant with your new baby, were you ever told by a doctor, nurse, or other health care worker that you had depression? (% “Yes”)**

**Q12A: During the 3 months before you got pregnant, did you have asthma?\*\*\* (% “Yes”)**

**Q12B: During the 3 months before you got pregnant, did you have anemia (poor blood, low iron)? (% “Yes”)**

**Q12C: During the 3 months before you got pregnant, did you have heart problems? (% “Yes”)**

**Q12D: During the 3 months before you got pregnant, did you have epilepsy (seizures)? (% “Yes”)**

**Q12E: During the 3 months before you got pregnant, did you have thyroid problems? (% “Yes”)**

**Q12F: During the 3 months before you got pregnant, did you have anxiety?\*\*\* (% “Yes”)**

**Q13A: Thinking back to just before you got pregnant with your new baby, how did you feel about becoming pregnant: I wanted to be pregnant later.\*\*\* (% “Yes”)**

**Q13B: Thinking back to just before you got pregnant with your new baby, how did you feel about becoming pregnant: I wanted to be pregnant sooner.\*\*\* (% “Yes”)**

**Q13C: Thinking back to just before you got pregnant with your new baby, how did you feel about becoming pregnant: I wanted to be pregnant then.\*\*\* (% “Yes”)**

**Q13D: Thinking back to just before you got pregnant with your new baby, how did you feel about becoming pregnant: I did not want to be pregnant then or at any time in the future.\*\*\* (% “Yes”)**

**Q13E: Thinking back to just before you got pregnant with your new baby, how did you feel about becoming pregnant: I wasn't sure what I wanted.\*\*\* (% “Yes”)**

**Q14A: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: less than 1 year. \*\*\* (% “Yes”)**

**Q14B: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: 1 year to less than 2 years. \*\*\* (% “Yes”)**

**Q14C: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: 2 years to less than 3 years.\*\*\* (% “Yes”)**

**Q14D: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: 3 years to 5 years.\*\*\* (% “Yes”)**

**Q14E: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: more than 5 years.\*\*\* (% “Yes”)**

**Q15: When you got pregnant with your new baby, were you trying to get pregnant?\*\*\* (% “Yes”)**

**Q16: When you got pregnant with your new baby, were you or your husband or partner doing anything to keep from getting pregnant?\*\*\* (% “Yes”)**

**Q17A: I didn't mind if I got pregnant is the reason for my not doing anything to keep from getting pregnant.\*\*\* (% “Yes”)**

**APPENDIX A (RAW VARIABLE GRAPHS)**

**Appendix AQ5: Did the baby born just before your new one weigh less than 5 pounds, 8 ounces (2.5 kg) at birth?§§,\*\*\* [RAW] (% “Yes”)**

**Appendix AQ6: Was the baby just before your new one born earlier than 3 weeks before his or her due date?§§,\*\*\* [RAW] (% “Yes”)**

**Appendix AQ14A: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: less than 1 year. \*\*\* [RAW] (% “Yes”)**

**Appendix AQ14B: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: 1 year to less than 2 years. \*\*\* [RAW] (% “Yes”)**

**Appendix AQ14C: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: 2 years to less than 3 years.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ14D: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: 3 years to 5 years.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ14E: If you wanted to be pregnant later, how much longer did you want to wait to become pregnant: more than 5 years.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ16: When you got pregnant with your new baby, were you or your husband or partner doing anything to keep from getting pregnant?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ17A: I didn't mind if I got pregnant is the reason for my not doing anything to keep from getting pregnant.\*\*\* [RAW] (% "Yes")**

**Appendix AQ17B: I thought I could not get pregnant at that time is the reason for my not doing anything to keep from getting pregnant.\*\*\* [RAW] (% "Yes")**

**Appendix AQ17C: I had side effects from the birth control method I was using is the reason for my not doing anything to keep from getting pregnant.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ17D: I had problems getting birth control when I needed it is the reason for my not doing anything to keep from getting pregnant.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ17E: I thought my husband or partner or I was sterile (could not get pregnant at all) is the reason for my not doing anything to keep from getting pregnant.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ17F: My husband or partner didn't want to use anything is the reason for my not doing anything to keep from getting pregnant.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ17G: I forgot to use a birth control method is the reason for my not doing anything to keep from getting pregnant.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ18: Did you take any fertility drugs or receive any medical procedures from a doctor, nurse, or other health care worker to help you get pregnant with your new baby?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ21: Did you get prenatal care as early in your pregnancy as you wanted?\*\*\***  
 [RAW] (% “Yes”)

**Appendix AQ22A: I couldn't get an appointment when I wanted one kept me from getting prenatal care at all or as early as I wanted. \*\*\*** [RAW] (% “Yes”)

**Appendix AQ22B: I didn't have enough money or insurance to pay for my visits kept me from getting prenatal care at all or as early as I wanted.\*\*\* [RAW] (% "Yes")**

**Appendix AQ22C: I didn't have any transportation to get to the clinic or doctor's office kept me from getting prenatal care at all or as early as I wanted.\*\*\* [RAW] (% "Yes")**

**Appendix AQ22D: The doctor or the health plan would not start care as early as I wanted kept me from getting prenatal care at all or as early as I wanted. \*\*\* [RAW] (% “Yes”)**

**Appendix AQ22E: I had too many other things going on kept me from getting prenatal care at all or as early as I wanted. \*\*\* [RAW] (% “Yes”)**

**Appendix AQ22F: I couldn't take time off from work or school kept me from getting prenatal care at all or as early as I wanted.\*\*\* [RAW] (% "Yes")**

**Appendix AQ22G: I didn't have my Medicaid (Diamond State Partners, Unison, or Delaware Physicians Care) card kept me from getting prenatal care at all or as early as I wanted.\*\*\* [RAW] (% "Yes")**

**Appendix AQ22H: I didn't have anyone to take care of my children kept me from getting prenatal care at all or as early as I wanted.\*\*\* [RAW] (% "Yes")**

**Appendix AQ22I: I didn't know I was pregnant kept me from getting prenatal care at all or as early as I wanted.\*\*\* [RAW] (% "Yes")**

**Appendix AQ22J: I didn't want anyone else to know I was pregnant kept me from getting prenatal care at all or as early as I wanted. \*\*\* [RAW] (% "Yes")**

**Appendix AQ22K: I didn't want prenatal care kept me from getting prenatal care at all or as early as I wanted. \*\*\* [RAW] (% "Yes")**

**Appendix AQ23A: During your most recent pregnancy, did private health insurance from your job or the job of your husband, partner, or parents help pay for your prenatal care?\*\*\***

[RAW] (% “Yes”)

**Appendix AQ23B: During your most recent pregnancy, did private health insurance purchased directly from an insurance company help pay for your prenatal care? [RAW] (% “Yes”)**

**Appendix AQ23C: During your most recent pregnancy, did Medicaid (Diamond State Partners, Unison, or Delaware Physicians Care) help pay for your prenatal care?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ23D: During your most recent pregnancy, did Delaware Healthy Children Program (DHCP/SCHIP) help pay for your prenatal care? [RAW] (% “Yes”)**

**Appendix AQ23E: During your most recent pregnancy, did CHAP – Community Healthcare Access Program help pay for your prenatal care? [RAW] (% “Yes”)**

**Appendix AQ23F: During your most recent pregnancy, did TRICARE or other military health care help pay for your prenatal care? [RAW] (% “Yes”)**

**Appendix AQ23G: I did not have any health insurance to help pay for my prenatal care.**  
 [RAW] (% “Yes”)

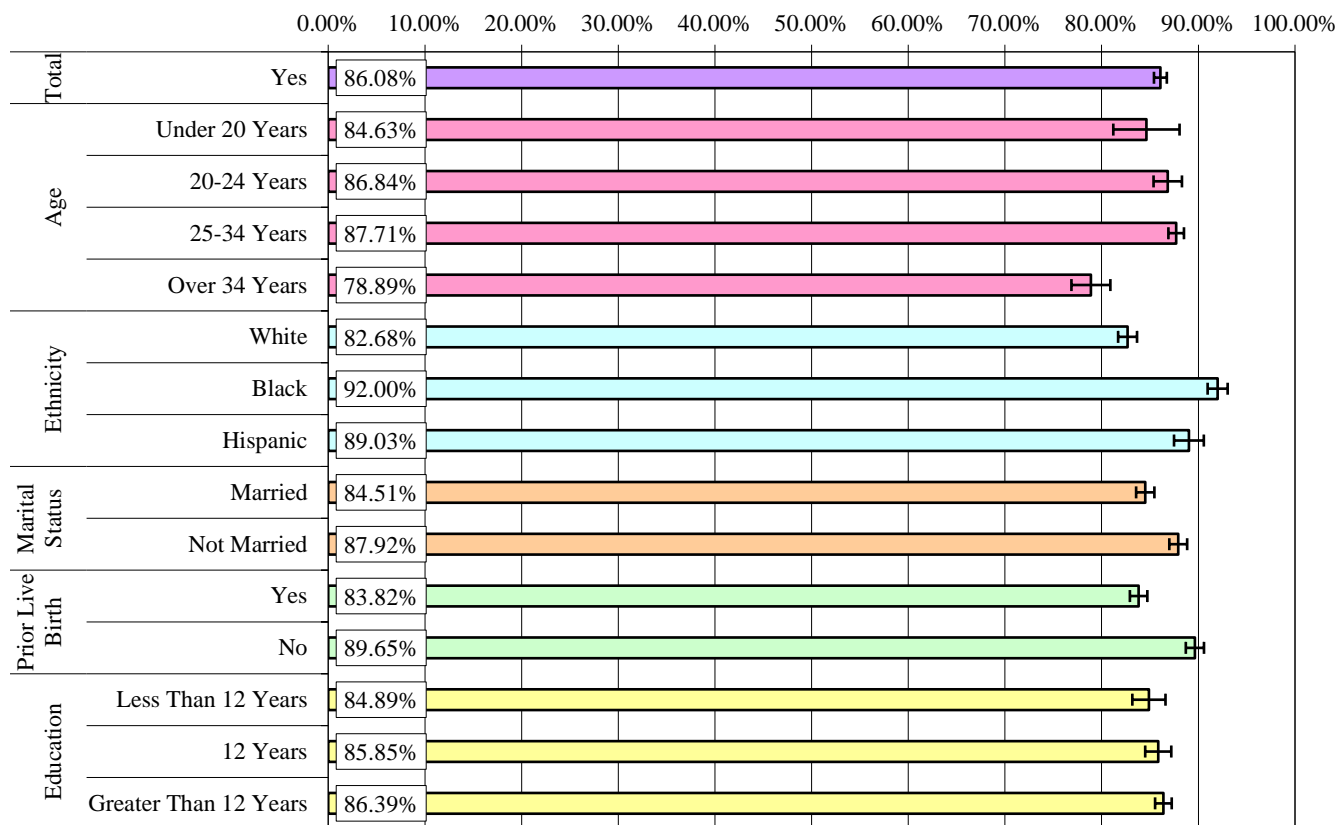

**Appendix AQ24A: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about how much weight you should gain during your pregnancy?\*\*\***  
 [RAW] (% “Yes”)

**Appendix AQ24B: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about how smoking during pregnancy could affect your baby?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ24C: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about breastfeeding your baby?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ24D: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about how drinking alcohol during pregnancy could affect your baby?\*\*\* [RAW] (% “Yes”)**

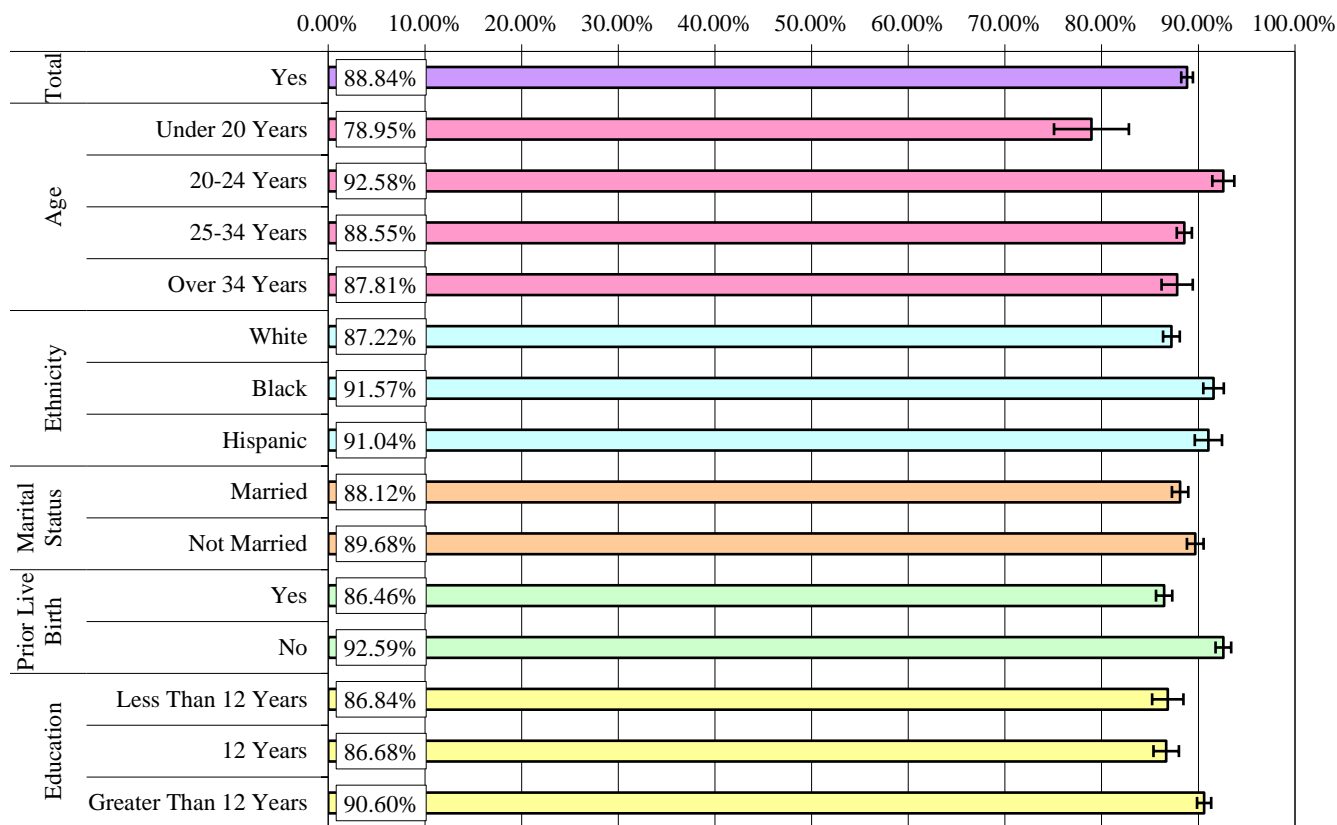

**Appendix AQ24E: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about using a seat belt during pregnancy?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ24F: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about medicines that are safe to take during your pregnancy?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ24G: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about how using illegal drugs could affect your baby?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ24H: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about doing tests to screen for birth defects or diseases that run in your family?\*\*\***

[RAW] (% “Yes”)

**Appendix AQ24I: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about the signs and symptoms of preterm labor?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ24J: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about getting tested for HIV (the virus that causes AIDS)?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ24K: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about what to do if you feel depressed during pregnancy or after your baby is born?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ24L: During any prenatal visit, did a doctor, nurse, or other health care worker talk with you about physical abuse to women by their husbands or partners?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ25A: During your most recent pregnancy, were you satisfied during your prenatal care with the amount of time you had to wait after you arrived for your visits?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ25B: During your most recent pregnancy, were you satisfied during your prenatal care with the amount of time the doctor, nurse, or midwife spent with you during your visits?\*\*\***  
 [RAW] (% “Yes”)

**Appendix AQ25C: During your most recent pregnancy, were you satisfied during your prenatal care with the advice you got on how to take care of yourself?\*\*\***  
 [RAW] (% “Yes”)

**Appendix AQ25D: During your most recent pregnancy, were you satisfied during your prenatal care with the understanding and respect that the staff showed toward you as a person?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ37: In the 3 months before you got pregnant, did you smoke 11 or more cigarettes on average each day?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ38: In the last 3 months of your pregnancy, did you smoke one or more cigarettes on average each day?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ39: Do you currently smoke 11 or more cigarettes on average each day?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ42: During the 3 months before you got pregnant, did you have four or more drinks on average per week?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ43: During the last 3 months of your pregnancy, did you have one or more drinks on average per week?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ51: Is your baby alive now?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ52: Is your baby living with you now?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ53: Did you ever breastfeed or pump breast milk to feed your new baby, even for a short period of time?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ54: Are you currently breastfeeding or feeding pumped milk to your new baby?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ56: Do you most often lay your baby down on his or her back when he or she sleeps?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ57: Does your baby always or often sleep in the same bed/crib with you or anyone else?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ58: Was your new baby seen by a doctor, nurse, or other health care worker for a one week checkup after he or she was born?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ59: Since your new baby was born, has a home visitor come to your home to help you learn how to take care of yourself or your new baby?\*\*\* [RAW] (% “Yes”)**

**Appendix AQ61A: I am not having sex is why I or my husband or partner are not doing anything to keep me from getting pregnant now.†††,\*\*\* [RAW] (% “Yes”)**

**Appendix AQ61B: I want to get pregnant is why I or my husband or partner are not doing anything to keep me from getting pregnant now.†††,\*\*\* [RAW] (% “Yes”)**

**Appendix AQ61C: I don't want to use birth control is why I or my husband or partner are not doing anything to keep me from getting pregnant now.<sup>†††,\*\*\*</sup> [RAW] (% "Yes")**

**Appendix AQ61D: I am worried about side effects from birth control is why I or my husband or partner are not doing anything to keep me from getting pregnant now.<sup>†††,\*\*\*</sup> [RAW] (% "Yes")**

**Appendix AQ61E: My husband or partner doesn't want to use anything is why I or my husband or partner are not doing anything to keep me from getting pregnant now.<sup>†††,\*\*\*</sup> [RAW] (% "Yes")**

**Appendix AQ61F: I have problems getting birth control when I need it is why I or my husband or partner are not doing anything to keep me from getting pregnant now.<sup>†††,\*\*\*</sup> [RAW] (% "Yes")**

**Appendix AQ61G: I had my tubes tied or blocked is why I or my husband or partner are not doing anything to keep me from getting pregnant now.<sup>†††,\*\*\*</sup> [RAW] (% “Yes”)**

**Appendix AQ61H: My husband or partner had a vasectomy is why I or my husband or partner are not doing anything to keep me from getting pregnant now.<sup>†††,\*\*\*</sup> [RAW] (% “Yes”)**

**Appendix AQ61I: I am pregnant now is why I or my husband or partner are not doing anything to keep me from getting pregnant now.†††,\*\*\* [RAW] (% “Yes”)**

**Appendix AQ62A: Having my tubes tied or blocked (female sterilization, Essure®, Adiana®) is what is keeping me from getting pregnant now. [RAW] (% “Yes”)**

**Appendix AQ62B: A vasectomy (male sterilization) is what is keeping my husband or partner from my getting pregnant now. [RAW] (% “Yes”)**

**Appendix AQ62C: The birth control pill is what is keeping me from getting pregnant now.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ62D: Condoms are what is keeping my husband or partner from my getting pregnant now.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ62E: Injection (Depo-Provera®) is what is keeping me from getting pregnant now.\*\*\* [RAW] (% “Yes”)**

**Appendix AQ62F: Contraceptive implant (Implanon®) is what is keeping me from getting pregnant now. \*\*\* [RAW] (% “Yes”)**

**Appendix AQ62G: Contraceptive patch (OrthoEvra®) or vaginal ring (NuvaRing®) is what is keeping me from getting pregnant now. \*\*\* [RAW] (% “Yes”)**

**Appendix AQ62H: IUD (including Mirena® or ParaGard®) is what is keeping me from getting pregnant now. [RAW] (% “Yes”)**

**Appendix AQ62I: Natural family planning (including rhythm method) is what is keeping me from getting pregnant now. [RAW] (% “Yes”)**

**Appendix AQ62J: Withdrawal (pulling out) is what is keeping me from getting pregnant now.**\*\*\*  
 [RAW] (% “Yes”)

**Appendix AQ62K: Not having sex (abstinence) is what is keeping me from getting pregnant now.**\*\*\*  
 [RAW] (% “Yes”)

**Appendix AQ69A: During the 12 months before you got pregnant with your new baby, did you have a miscarriage, fetal death, or stillbirth less than 6 months before getting pregnant?\*\*\***

[RAW] (% “Yes”)

**Appendix AQ69B: During the 12 months before you got pregnant with your new baby, did you have a miscarriage, fetal death, or stillbirth 6 to 12 months before getting pregnant?\*\*\***

[RAW] (% “Yes”)

**Appendix AQ71: During any of your prenatal care visits, did a doctor, nurse, or other health care worker talk with you about fetal (baby) kick counts and how to do them?\*\*\* [RAW] (% “Yes”)**
