REPORTED PREGNANCIES

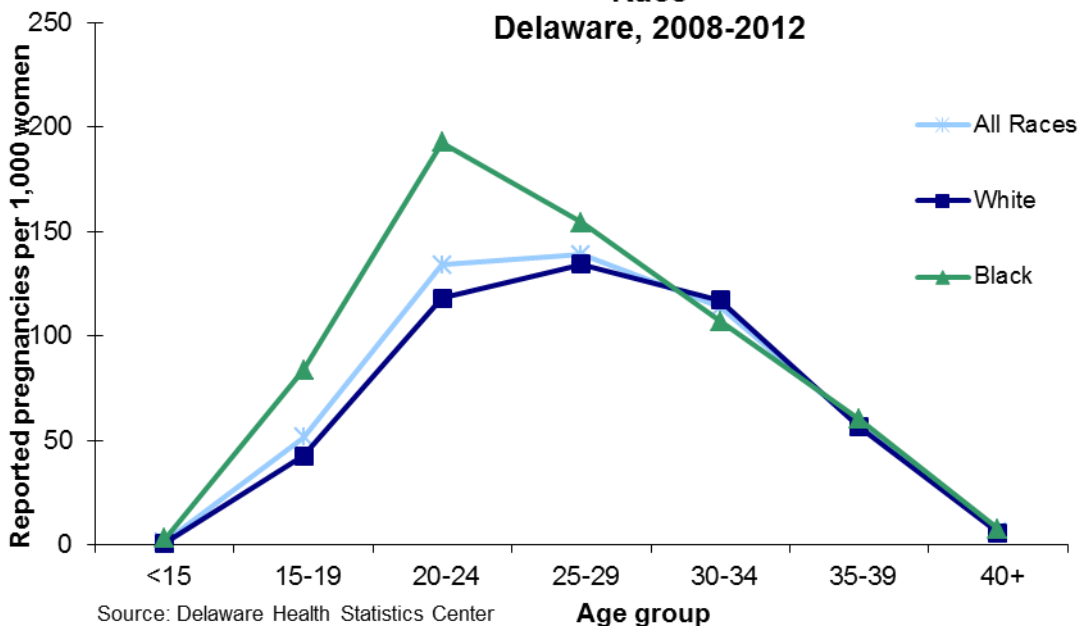

At 84 reported pregnancies per 1,000 women ages 15-44, the 2008-2012 rate of reported pregnancies remained stable. Although pregnancy rates of black mothers were significantly higher than those of white mothers in every county, New Castle County's difference between white (74) and black (108) was the largest.

For women of all races, the 20-24 year age group had the highest pregnancy rate, at 134 pregnancies per 1,000 women in 2008-2012.

With the exception of the 30-34 age group, black women had higher pregnancy rates than white women.

REPORTED PREGNANCIES

Teen (15-19) pregnancy rates for all race and county groups declined between 2007-2011 to 2008-2012. Sussex County's black teen pregnancy rate showed the greatest decline from 94.9 for 2007-2011 to 82.3 for 2008-2012. In 2008-2012, white teens in New Castle County had the lowest reported pregnancy rates. With the exception of Sussex County, where white teen pregnancy rates were the highest, black teen pregnancy rates were more than twice that of white teens.

PRMARIT

Notes:

1. Percentages may not add to 100% due to rounding.
2. Percentages are calculated based upon the total number of pregnancies within each race-marital status category.
3. Percentages for the race category "Other" may be misleading due to the small number of pregnancies in this category.

Notes:

1. Percentages may not add to 100% due to rounding.
2. Percentages are calculated based upon the total number of induced terminations of pregnancy in each race category.
3. Percentages for the race category "Other" may be misleading due to the small number of induced terminations of pregnancy in this category.
