

Lead in Drinking Water Sampling Results - Schools as of October 12, 2022

Below is a list of the results of lead levels in water samples collected at schools within the State of Delaware. Results are grouped by school district and then separated by individual schools within the district.

- All results are listed in units of milligram per liter (mg/L). The EPA maximum contaminant level for lead is 0.015 mg/L.
- Results are noted with **red text** and a **red background** = DPH and the district working together to reduce exposures
- Results noted with **yellow text** and a **yellow background** = continued/additional monitoring
- Results noted with **green text** and a **green background** = no action needed

To use this form:

- Enter the name of the district or school in the "Find" box in your pdf reader.
- Hit enter after putting in the school name and the computer will search through the pdf.
- School Districts are alphabetized and bookmarked
- Use the forward or backward arrow button near the "find" field to move between multiple matching records (i.e., schools with multiple sampling points).
- To perform a new search, delete the entered name or certificate number and start as described in the first step.

Status Categories:

- Sample Date – date the sample was collected from source (i.e. sink, drinking water fountain, spigot, etc.)
- Received Date – date the sample was received by the Division of Public Health Lab
- School – school from which the sample was collected
- Sample Point – location within the school the sample was collected
- Result – amount of lead detected in the sample (mg/L)
- MCL – maximum contaminant level for lead 0.015 mg/L
