Dr. Sharfstein is a consultant for Audacious Inquiry, a Maryland-based health IT company and with Sachs Policy Group, a healthcare consulting practice based in New York City.

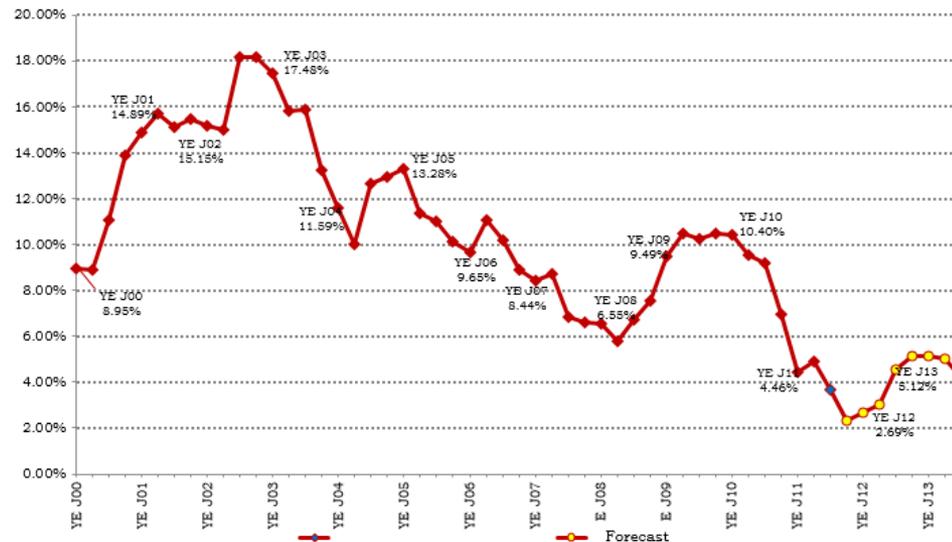

Hospital Payment in Maryland

- Since the late 1970s, the Maryland's quasi-public Health Services Cost Review Commission sets inpatient and outpatient hospital rates for all public and private payers.
- Essentially, each hospital received a rate card, and all payers pay off of the rate card
- Over 35 years, Maryland's rate-setting system:
 - Eliminated cost-shifting among payers
 - Allocated cost of uncompensated care and medical education among all payers
 - Allowed usage of creative of incentives to improve quality and outcomes

2013: Crisis in the Maryland System

- Medicare participation required Maryland to keep rate of growth of prices below national trends

What to do?

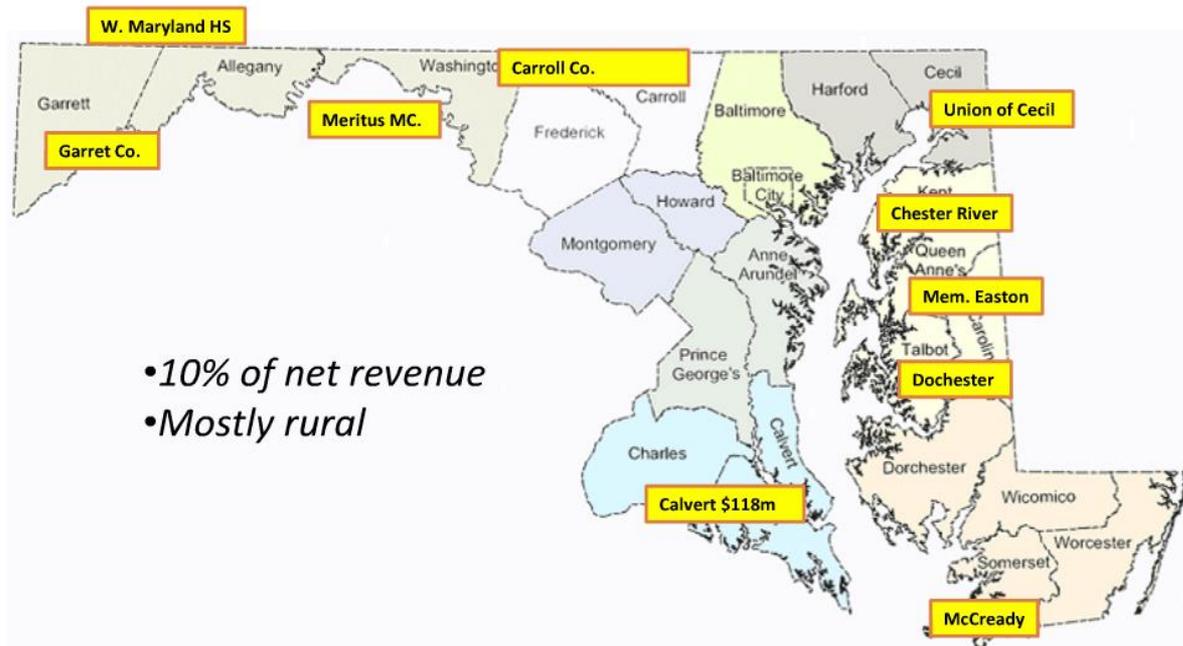

- Crisis in healthcare costs = opportunity for health?
- Maryland had a unique opportunity to restructure hospital payment in order to control costs and incentivize prevention.

A Pilot: Total Patient Revenue, Meaning a Global Budget Across All Payers

Strong Incentive for Clinical Transformation

TPR Hospitals

Concept: Move All Hospitals to Global Budgets

- Former Hospital Payment Model:

- Volume Driven

Rate Per Unit or Case (Updated for Trend and Value)

- Unknown at the beginning of year
- More units creates more revenue

- New Hospital Payment Model:

- Population Driven

Updates for Trend, Population, Value

- Known at the beginning of year
- More units does not create more revenue

Source: HSCRC

Key Points

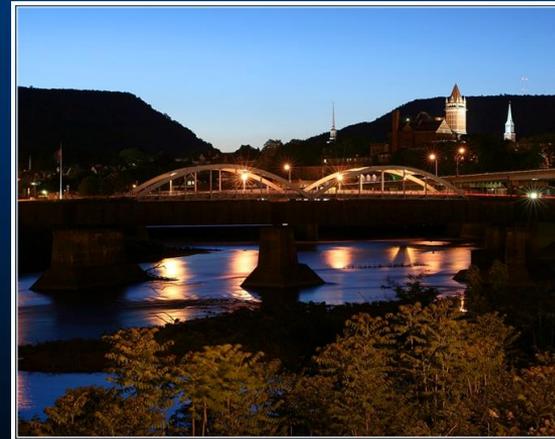

- Hospitals can use revenue to invest in prevention outside the walls
- Year-over-year adjustments in budgets based on:
 - Population changes
 - Market shifts
 - Quality
- Hospitals keep revenue as services decline, as long as no market shifts or quality problems
- Fewer preventable admissions = better bottom line

Western Maryland Health System

Facts About WMHS

- \$330 Million in operating revenues for FY14
 - 11,805 adult admissions per year (Down from 15,521 in FY11)
 - 52,331 ED visits per year
 - 1,000 deliveries per year
- Over \$300 million economic impact on the region annually
- \$36.5 million in Community Benefit for FY2014

Source: WMHS

Managing Under TPR

Keys to Success

- Shift emphasis from volume to value
- Reduce admissions & re-admissions
- Provide care in the most appropriate location
- Create stronger patient engagement
- Reduce variation in quality
- Improve payment alignment with physicians
- Re-invest savings
- Educate employees, medical staff and community about changes
- Work collaboratively with community partners
- Focus on better community access
- Increase health & wellness activities on a regional basis
- Reduce utilization rates in ED, inpatient, observation and ancillary
- Improve chronic care delivery

Source: WMHS

A CENTURY OF SAVING LIVES—MILLIONS AT A TIME 1916/2016

Successful Strategies Under TPR

Pre-Acute Care Focused

- Added primary care practices where our most vulnerable patients reside
- WMHS created the Center for Clinical Resources consisting of a multi-disciplinary team of NPs, RNs, Dietitians, Pharmacists, Respiratory Therapists & Care Coordinators
 - Diabetes Management
 - Congestive Heart Failure
 - Anticoagulation Clinic
 - Medication Therapy Management
 - Respiratory Clinic
 - Hypertension Patients

18

Successful Strategies Under TPR

Pre-Acute Care Focused

- Formed a Clinically Integrated Network with our physicians and other partners
- Established an Accountable Care Organization
- Focused on keeping independent physicians who no longer admit engaged with our health system
- Partnered with independent urgent care centers who were previous competitors

19

Successful Strategies Under TPR

Acute Care Focused

- Targeted high utilizers of services
- Focused on appropriateness of admissions versus the number of admissions
- Reviewing daily every readmission within 30 days to determine the reasons for the readmission
- Formed teams of clinicians to round daily on patients with a LOS of 3 days or longer
- Nurses rounding hourly on every patient & performing shift report at the patient's bedside

20

Successful Strategies Under TPR

Acute Care Focused

- Developed teams of physicians & nurses to work with non-compliant physicians related to readmissions, use rates, denials, LOS & potentially preventable conditions
- Revamped patient education programs
- Assigned Pharmacy staff to the ED & inpatient units for medication reconciliation & rounding on patients
- Created dedicated care coordinators and a clinical coordinator in Behavioral Health

21

Successful Strategies Under TPR

Acute Care Focused

- Implemented Clinical Documentation Improvement programs to ensure accurate documentation of POA conditions
- Started quarterly Hot Topics sessions for physicians and advanced practice professionals where focused education is needed and /or required
- Changed discharge planning processes to cover patients until they see their primary care provider
- Began discharging patients with their medications

22

Successful Strategies Under TPR

Post-Acute Care Focused

- Follow up with all discharged patients
- Expanded Home Care resources to address a dramatic increases in visits
- Created teams of Community Health Care Workers
- Created SNF Transition Care Coordinators and SNFists ([physicians/nurse practitioners] within our own skilled nursing facilities & other SNF community partners
- Connected patients to services they will need post discharge

Yet Western Maryland Health Systems, the major hospital serving this poor and isolated region, is carrying out an experiment that could leave a more profound imprint on the delivery of health care than President Obama's reforms.

Over the last three years, the hospital has taken its services outside its walls. It has opened a diabetes clinic, a wound center and a behavioral health clinic. It has hired people to follow up with older, sicker patients once they are discharged. It has added primary care practices in some neighborhoods.

The goal, seemingly so simple, has so far proved elusive

Outside the Walls

Meritus Health

School Health Program

At Meritus Health, we believe that all children are entitled to quality healthcare services and that good health helps support academic achievement. The Meritus Health School Health program serves the 22,000 students of Washington County Public School system in 27 elementary schools, eight middle schools and eight high schools. On average, our healthcare providers see 500 to 700 students each month in school health rooms.

Sinai Hospital and HealthCare Access Maryland Pioneer a New Program to Link Emergency Department Patients with Needed Services

Baltimore, MD – [Sinai Hospital](#) of Baltimore and [HealthCare Access Maryland](#) are piloting a groundbreaking program developed to proactively help patients, who frequently use the hospital's Emergency Department for non-urgent and chronic health conditions, better manage their own care, lead healthier lives, and in turn, save precious health-related resources.

Keys to Success (2)

- Sharing and effective use of electronic health data

CRISP Core Services

1. POINT OF CARE: Clinical Query Portal

- Search for your patients' prior hospital records (e.g., labs, radiology reports, etc.)
- Monitor the prescribing and dispensing of PDMP drugs
- Determine who are the other members of your patient's care team

2. CARE COORDINATION: Encounter Notification Service (ENS)

- Be notified when your patient is hospitalized in any MD, DC or DE hospital
- Receive special notification about ED visits that are potential readmissions
- Know when your MCO member is in the ED

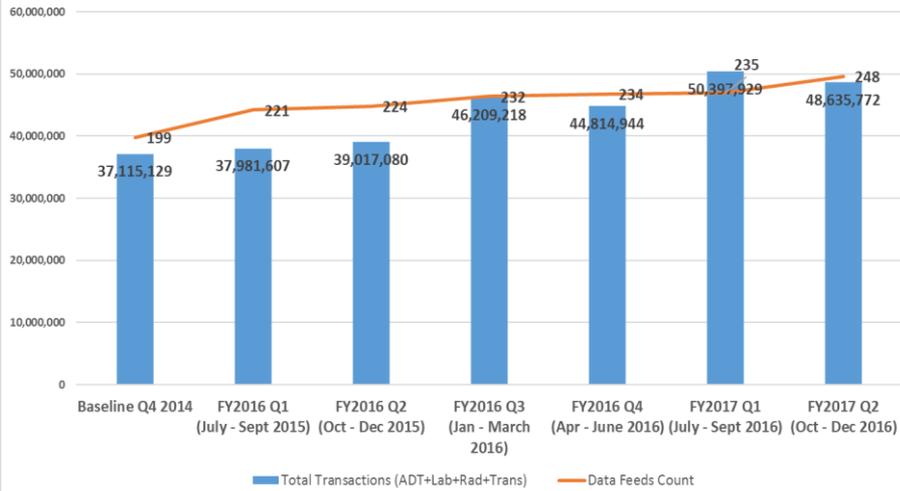

3. POPULATION HEALTH: CRISP Reporting Services (CRS)

- Use Case Mix data and Medicare claims data to:
 - Identify patients who could benefit from services
 - Measure performance of initiatives for QI and program reporting
 - Coordinate with peers on behalf of patients who see multiple providers

- Subscribers submit a patient panel to CRISP and identify which types of alerts they would like to receive
- Phase 1 notifications included only demographic information and the event types; Phase 2 included chief complaint and discharge diagnosis; Phase 3 includes a CCDA summary of care
- Hospitals can auto-subscribe to 30 day real-time readmission alerts
- CRISP has ADT exchange partnerships with DHIN in Delaware and ConnectVirginia. Anytime a Maryland or DC resident arrives at a Delaware or Northern Virginia hospital CRISP receives the ADT and can route it to a subscriber.

Perspective

Maryland's All-Payer Approach to Delivery-System Reform

Rahul Rajkumar, M.D., J.D., Ankit Patel, J.D., Karen Murphy, Ph.D., John M. Colmers, M.P.H., Jonathan D. Blum, M.P.P., Patrick H. Conway, M.D., and Joshua M. Sharfstein, M.D.

On January 10, 2014, the Centers for Medicare and Medicaid Services (CMS) and the State of Maryland jointly announced the launch of a state-wide model that will transform Maryland's health

care delivery system. Although some aspects of the new approach may be unique to Maryland and not applicable elsewhere, both the principles of this model and the process that led to its development may serve as a guide for future federal-state partnership efforts aiming to improve health care and to lower costs through an all-payer approach.

Since the late 1970s, Maryland has operated what is now the country's only all-payer rate-setting system for hospital services. An independent commission sets a rate structure for each hospital. All payers, public and private, pay for services according to these rates. Medicare's participation is authorized by the Social Security Act and is tied to a growth limit

in Medicare payment per hospital admission.

This system has eliminated cost shifting among payers, more equitably spread the costs of uncompensated care and medical education, and limited the growth of per-admission costs. The system's historical performance in containing payments per admission for all payers has been notable.¹ However, in recent years, both the incentives created by Maryland's current Medicare waiver and changes in the delivery system have created unnecessary pressure to increase the volume of hospital services provided. This pressure, combined with the fact that Medicare pays higher rates for hospital services in Maryland than it does under the national

prospective payment systems for inpatient and outpatient care, has resulted in per capita Medicare hospital costs in Maryland that are among the country's highest.

The new model, which is made possible by the authority granted to the Center for Medicare and Medicaid Innovation under the Affordable Care Act, will change the basis for Medicare's participation in Maryland's system. In place of the limit on per-admission payment, the new model focuses on overall per capita expenditures for hospital services, as well as on improvements in the quality of care and population health outcomes.

For 5 years beginning in 2014, Maryland will limit the growth of per capita hospital costs for all payers, including the growth of costs of both inpatient and outpatient care, to 3.58%, the 10-year compound annual growth rate of the per capita gross state product. Maryland will also limit the
