

DELAWARE DEPARTMENT OF HEALTH AND SOCIAL SERVICES DIVISION OF HEALTH CARE QUALITY OFFICE OF LONG TERM CARE RESIDENTS PROTECTION

UNIFORM ASSESSMENT INSTRUMENT

for

ASSISTED LIVING AGENCIES

		9.
	ė	

INTRODUCTION

The purpose of the Uniform Assessment Instrument (UAI) is to collect information regarding an assisted living applicant/resident's physical condition, medical status and psychosocial needs. The information is to be used to: (1) determine if an applicant meets eligibility for entrance or retention in an assisted living facility; (2) if admitted, determine the appropriate level of care for the resident and develop a service agreement; and (3) update service needs and the service agreement.

A resident seeking entrance shall have an initial UAI-based resident assessment completed by a registered nurse (RN) acting on behalf of the assisted living facility no more than 30 days prior to admission and no later than day of admission. In all cases the assessment will be completed prior to admission. At a minimum, regular updates must occur 30 days after admission, annually and when there is a significant change in the resident's condition.

permi	ation 5.9 states that the Assisted Living facilities shall not admit, provide services to, or the provision of services to any individual with any of the following conditions: Check ner these conditions are present:
	Requires care by a nurse that is more than intermittent or for more than a limited period of time.
	Requires skilled monitoring, testing, and aggressive adjustment of medications and treatments where there is the presence of, or reasonable potential of, an acute episode unless there is a RN to provide appropriate care.
	Requires monitoring of a chronic medical condition that is not essentially stabilized through available medications and treatments.
	Is bedridden for more than 14 days.
	Has developed stage three or four skin ulcers.
	Requires a ventilator.
	Requires treatment for a disease or condition that requires more than contact isolation.
	Has an unstable tracheostomy or has a stable tracheostomy of less than six months' duration.
	Has an unstable peg tube.
	Requires an IV or central line with an exception for a completely covered subcutaneously implanted venous port, provided the assisted living facility meets the following standards: 1) Facility records shall include the type, purpose and site of the port, the insertion date, and the last date medication was administered or the port flushed; 2) The facility shall document the presence of the port on the Uniform Assessment Instrument, the service plan, interagency referrals and any facility reports; and 3) The facility shall not permit the provision of care to the port or surrounding area, the administration of medication or the flushing of the port or the surgical removal of the port within the facility by facility staff, physicians or third party providers.
	Wanders such that the assisted living facility would be unable to provide adequate supervision and/or security arrangements.
	Exhibits behaviors that present a threat to the health or safety of themselves or others, such that the assisted living facility would be unable to eliminate the threat either through

			191	

Is socially inappropriate as determined by the assisted living facility such that the facility would be unable to manage the behavior after documented, reasonable efforts such as clinical assessments and counseling for a period of no more than 60 days.

If any of these conditions are present and the resident/applicant is not receiving Hospice care, assisted living is not appropriate for the resident/applicant. If the resident is receiving Hospice care, the above restrictions do not apply, provided that the Hospice program: 1) is licensed by the Department of Health and Social Services and 2) provides written assurance that, in conjunction with care provided by the assisted living facility, all of the resident's needs will be met without placing other residents at risk.
