Vaping can be hazardous to your health
(includes tobacco and marijuana products both legal and illegal)

Vaping Associated Pulmonary Injury could include:

- Shortness of breath
- Nonproductive cough
- Pleuritic chest pain
- Rapid heart beat (regular or irregular)
- Fever
- Chills
- Fatigue
- Gastrointestinal distress: nausea, vomiting, abdominal pain, diarrhea
- Hypoxemia (abnormally low blood-oxygen level)
- Acute or subacute respiratory failure

Vaping marijuana or tobacco products can be extremely hazardous to your health. State Regulators and the Centers for Disease Control and Prevention (CDC) are researching the problem to discover more about this health crisis. Currently, the Delaware Division of Public Health advises against all forms of vaping. If you are vaping THC for medical purposes, talk to your health care provider about potentially safer options.
