**Intentionally left blank**

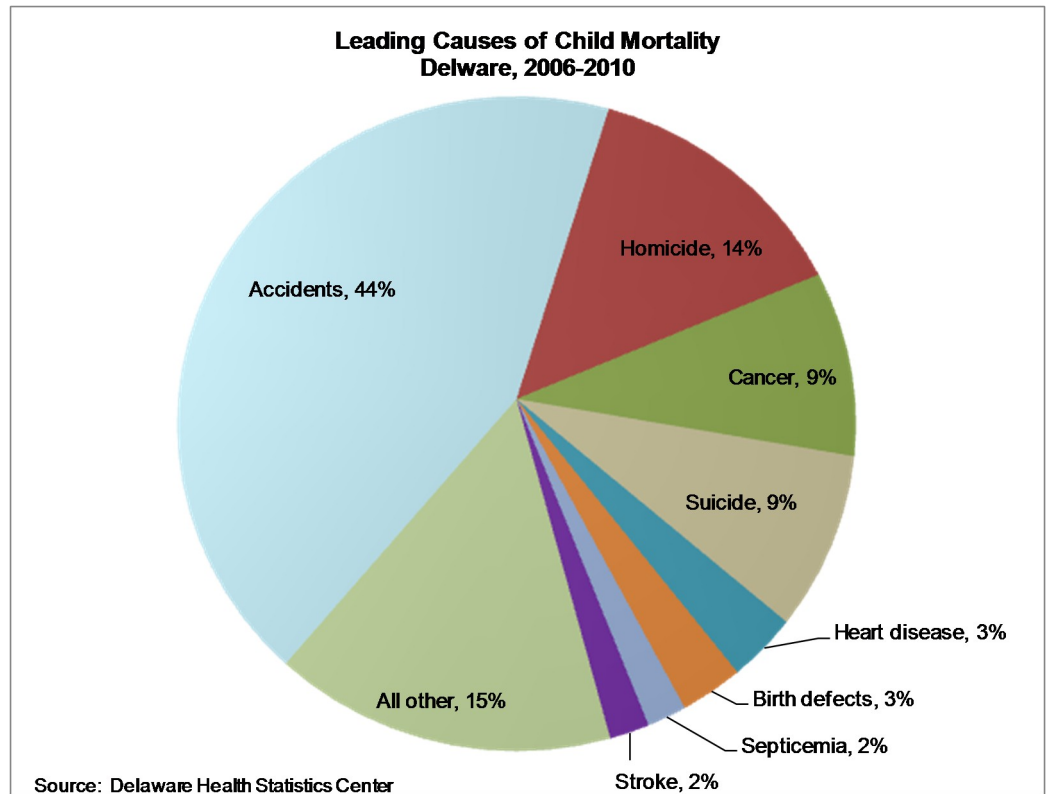

## CHILD MORTALITY

From 2006 to 2010, 282 children and adolescents between the ages of 1 and 19 died in Delaware, representing 0.8 percent of the total deaths that occurred during that time. Males accounted for 64 percent of all child deaths in 2006-2010.

After small fluctuations throughout the 1990s, the mortality rate for children ages 1 to 19 began to decline. Since its peak of 36 in 2000-2004, the rate has decreased 29 percent, to 25 deaths per 100,000 children.

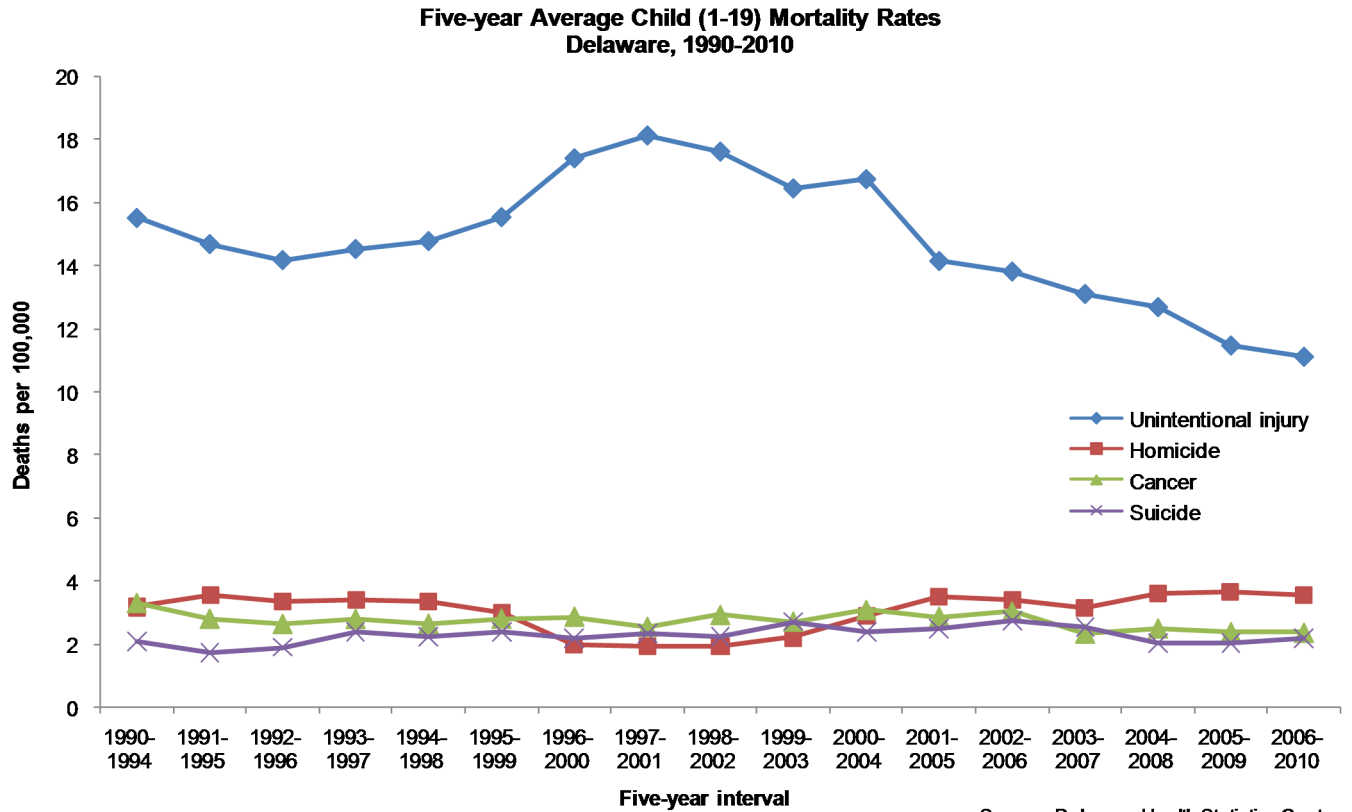

Accidents, homicide, cancer, and suicide were the four most common causes of child mortality in 2006-2010. Together, they accounted for three-quarters of all child deaths.

## CHILD MORTALITY

From 2001-2005 to 2006-2010, rates for three of the four leading causes of child mortality declined. Unintentional injury mortality rates declined by 32 percent; cancer and suicide mortality rates also decreased, though the change was not statistically significant. Homicide rates were stable at 3.5 deaths per 100,000 children.

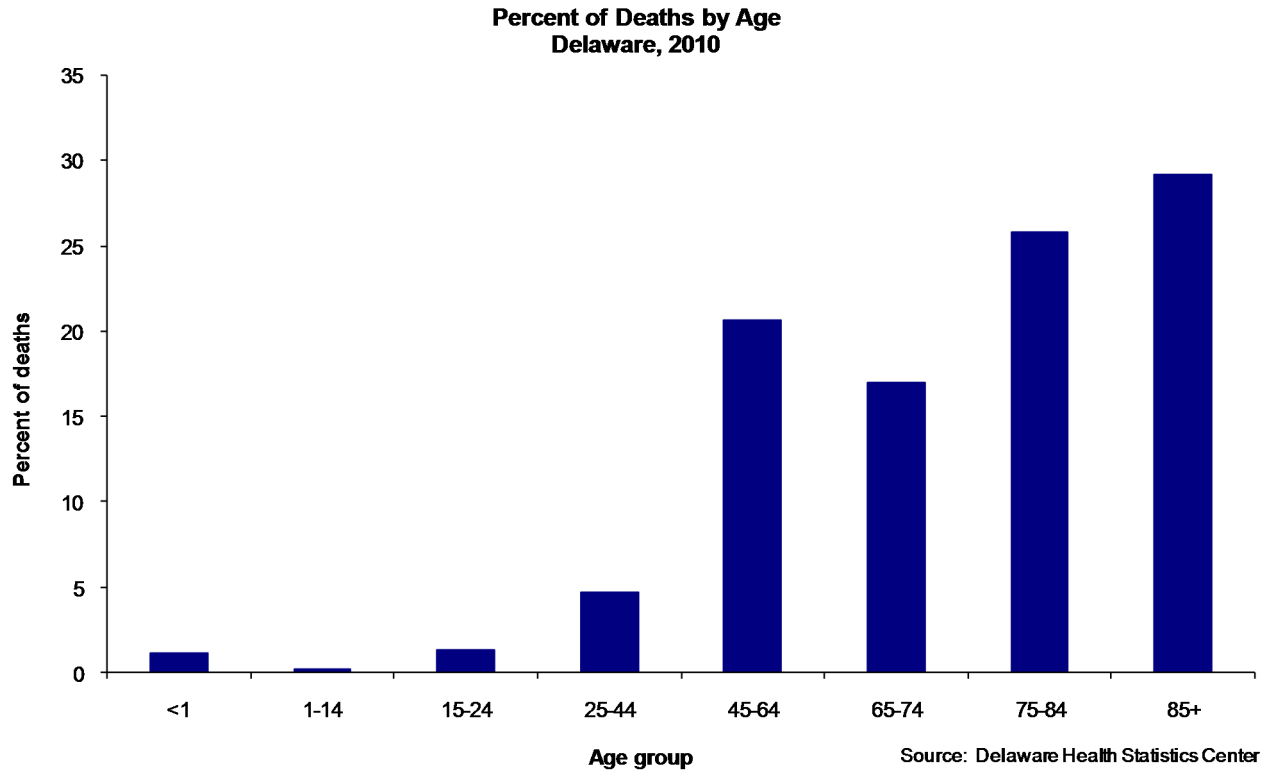

Detailed manner of the most common causes of child deaths in 2006-2010:

- Motor vehicle crashes accounted for 65 percent of all deaths due to unintentional injuries; the second and third most common causes of unintentional injury deaths of children were poisoning and drowning, which accounted for 11 and 10 percent of deaths respectively.
- Firearms and cutting/piercing accounted for over 90 percent of all homicides, 82 and 10 percent respectively.
- The majority of child cancer deaths were due to brain cancer (39 percent) and leukemia (27 percent).
- Suffocation, followed by firearms, were the most common methods of suicide, and accounted for 50 and 33 percent of the total suicide deaths.

## MORTALITY

More Delaware residents died in 2010 than in 2009. A total of 7,667 residents died, 88 of whom were infants under the age of 1. Deaths were split almost equally between males and females. Cancer and heart disease were the most common causes of death, accounting for 51 percent of all deaths in 2010.

- Twenty-nine percent of the Delawareans who died in 2010 were 85 or older. Deaths of those 75 and older accounted for more than half of all deaths.

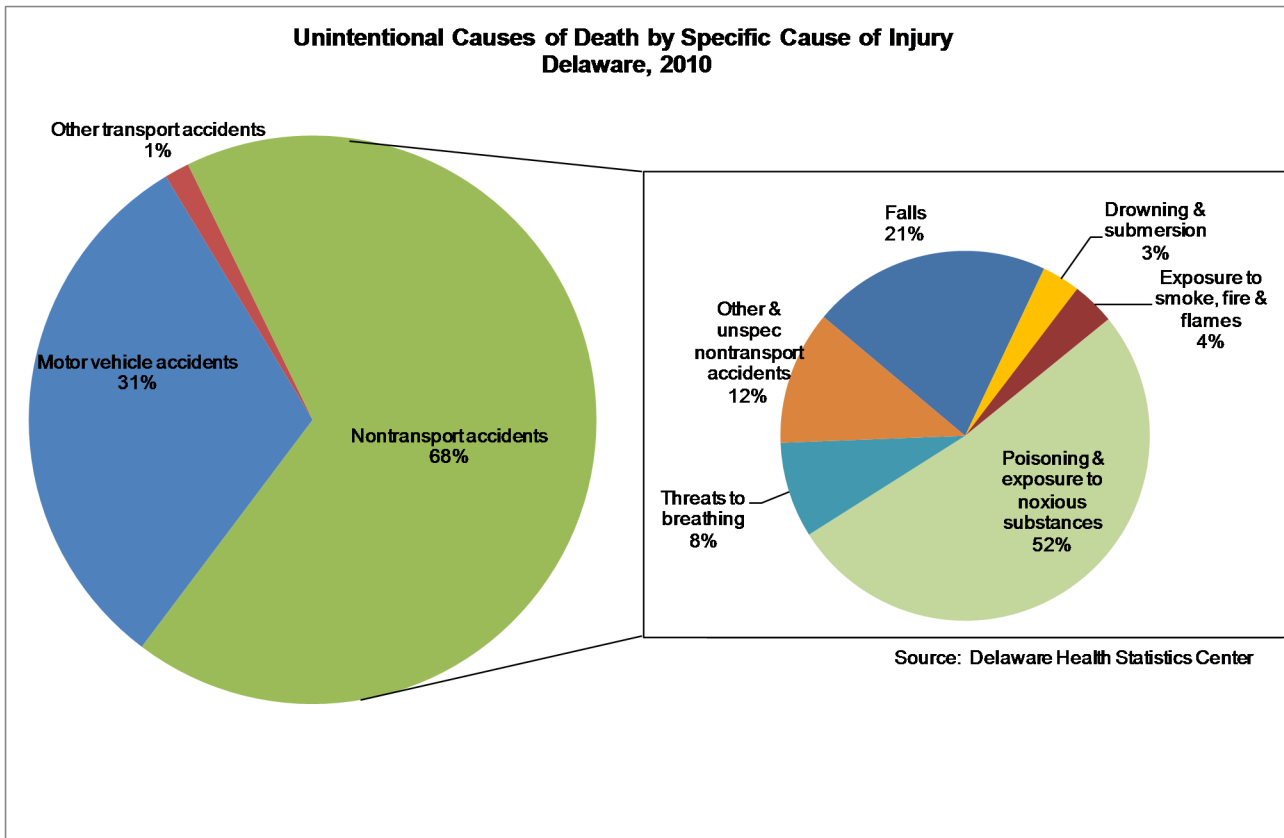

- A Delaware resident born in 2010 could expect to live an average of 79.1 years.
- Life expectancy at birth varied by race and sex; white females had the highest life expectancy (81.7) while black males had the lowest (72.5).
- In 1989, 80 percent of Delaware decedents were buried and 15 percent were cremated. By 2010, the distribution had shifted: 55 percent of decedents were buried and 41 percent were cremated.
- In 2010, the ten leading causes of death for residents of all ages were the same as the top 10 in 2009; the only changes were shifts in the rank order, with dementia and Alzheimer's disease both moving higher in the rankings.

Rank	Leading Cause of Death	Number
1	Malignant neoplasms (cancer)	1895
2	Diseases of heart (heart disease)	1761
3	Chronic lower respiratory diseases	441
4	Dementia	438
5	Cerebrovascular diseases (stroke)	408
6	Accidents (unintentional injuries)	354
7	Alzheimer's disease	217
8	Diabetes mellitus (diabetes)	197
9	Nephritis, nephrotic syndrome & nephrosis (kidney disease)	157
10	Influenza & pneumonia	138

## MORTALITY

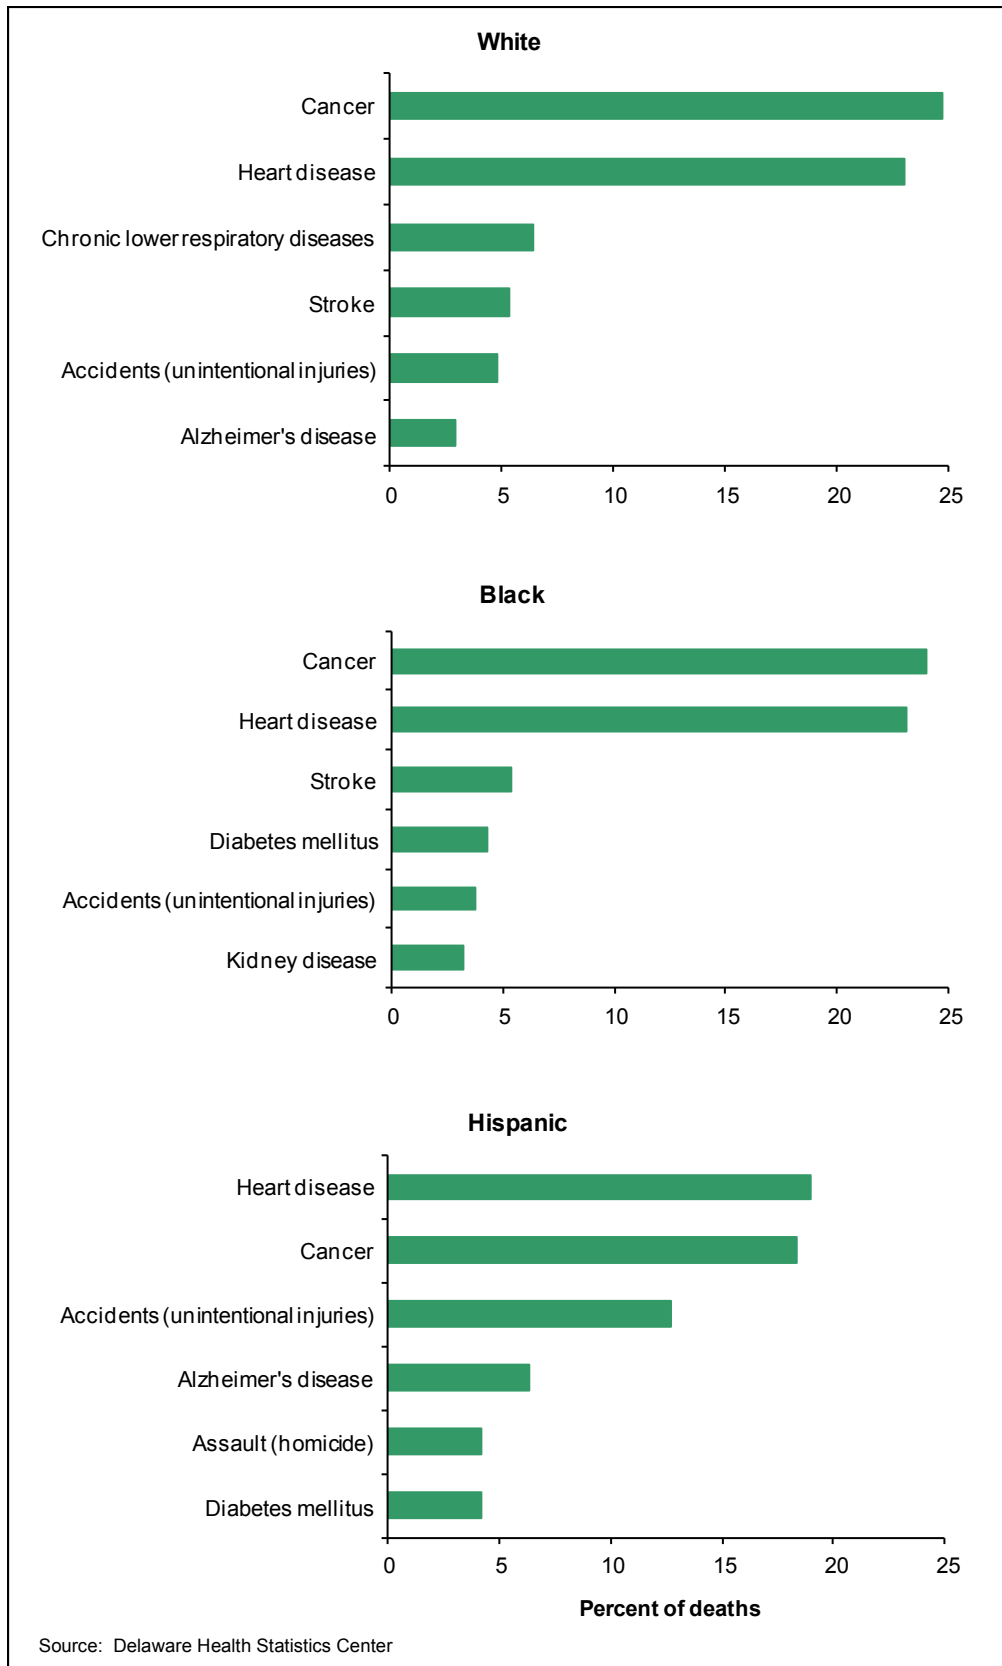

- There were 354 deaths due to unintentional injury in 2010 (4.6 percent of all deaths); 31 percent were due to motor vehicle accidents and 68 percent were due to non-transport accidents. Over half of the 239 nontransport accidents were caused by unintentional poisonings; the majority (94 percent) of unintentional poisonings were drug-induced poisonings.
- For the second year, unintentional poisonings surpassed motor vehicle injuries and became the leading cause of unintentional injury death in 2010.
  - For whites of both sexes, poisonings caused the most unintentional injuries, followed by motor vehicle accidents. For blacks of both sexes, motor vehicle accidents caused the greatest number of unintentional injuries.

- In 2006-2010, accidents were the number one cause of death for people 1-44 years of age, and they were responsible for 43 percent of all deaths of people 15-24 years of age. For decedents ages 15-24, accidents, homicides, and suicides were the three most frequent causes of death and accounted for three-fourths of total deaths (See Table F-11).

## MORTALITY

The leading causes of death varied by race and ethnic group. In 2010, the most common causes of death for white, black, and Hispanic Delawareans were:

## MORTALITY

Cancer mortality rates have decreased in all three counties since the early 1990s, though most recently Kent County rates leveled off. In 2006-2010, the 5-year age-adjusted cancer mortality rates ranged from 171.3 in Sussex County to 206.8 deaths per 100,000 population in Kent County.

Cancer mortality rates for black and white decedents followed the same declining trend, and though the gap between black and white cancer mortality rates has narrowed, black cancer mortality rates in 2006-2010 remained significantly higher than white rates.

**Five-year Average Age-specific Cancer Mortality Rates  
Delaware, 1990-1994 and 2006-2010**

Source: Delaware Health Statistics Center

The same decreases seen in the age-adjusted cancer mortality rates were reflected in the age-specific rates as well.

Cancer mortality rates declined for all age groups between 1990-1994 and 2006-2010. The 25-34 and 55-64 age groups experienced the largest decreases.

## MORTALITY

Heart disease was the second most common cause of death for both black and white Delawareans in 2006-2010. Both black and white heart disease mortality rates have declined significantly since 1990-1994, with white rates declining 45 percent and black rates declining 41 percent.

**Five-year Age-adjusted Heart Disease Mortality Rates by Race  
Delaware, 1990-2010**

Source: Delaware Health Statistics Center

Stroke mortality rates for both races continued their declining trends, with rates for both races decreasing 33 percent between 1990-1994 and 2006-2010. Due to the similarity in their declines, the black stroke mortality rate remained approximately 52 percent higher than white rate (54.3 versus 35.8).

**Five-year Age-adjusted Stroke Mortality Rates by Race  
Delaware, 1990-2010**

Source: Delaware Health Statistics Center

## MORTALITY

Though black mortality rates for diabetes have declined nearly 40 percent since 1990-1994, their rates were more than double that of whites in 2006-2010.

**Five-year Age-adjusted Diabetes Mortality Rates by Race  
Delaware, 1990-2010**

Source: Delaware Health Statistics Center

HIV/AIDS mortality has disproportionately affected Delaware's black population. Despite black HIV/AIDS mortality rates decreasing significantly since the 1993-1997 peak, their 2006-2010 mortality rate of 21.6 deaths per 100,000 was nearly 12 times that of whites. Though they made up only 21.5 percent of the total Delaware population in

**Five-year Age-adjusted HIV/AIDS Mortality Rates by Race  
Delaware, 1990-2010**

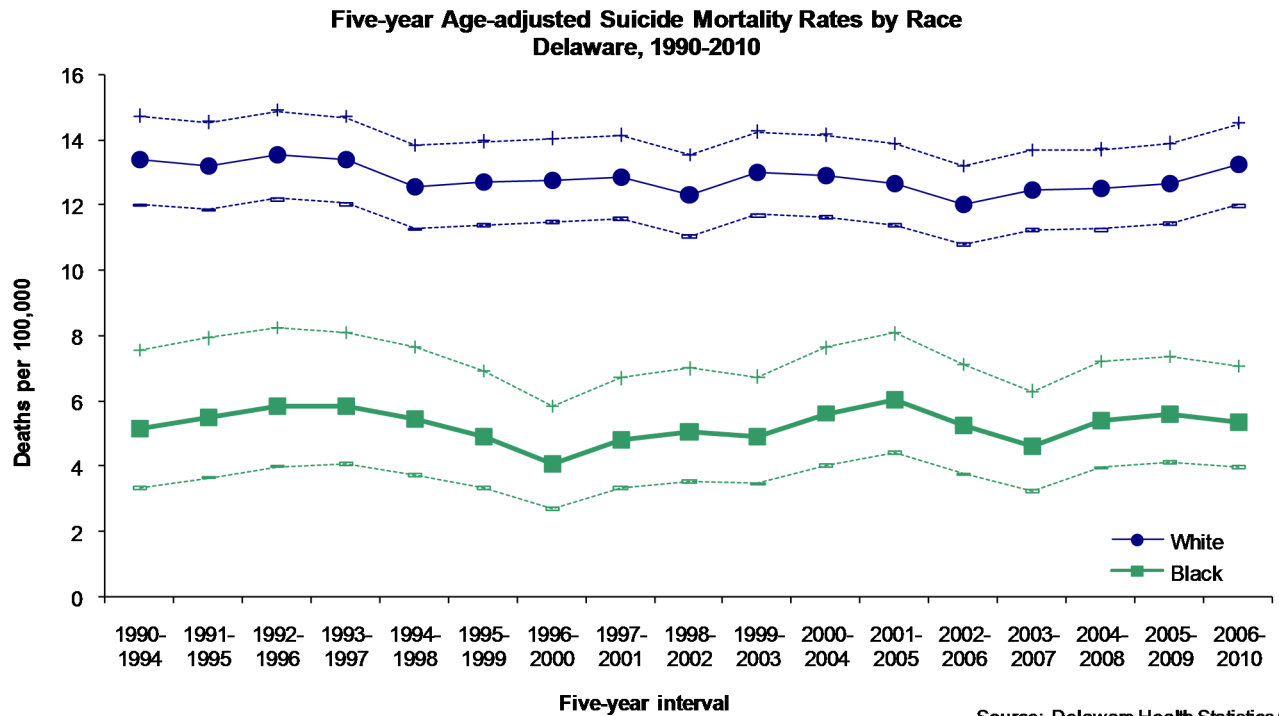

In 2006-2010, HIV was the eighth leading cause of death for black Delawareans; it ranked eighth for black males and seventh for black females.

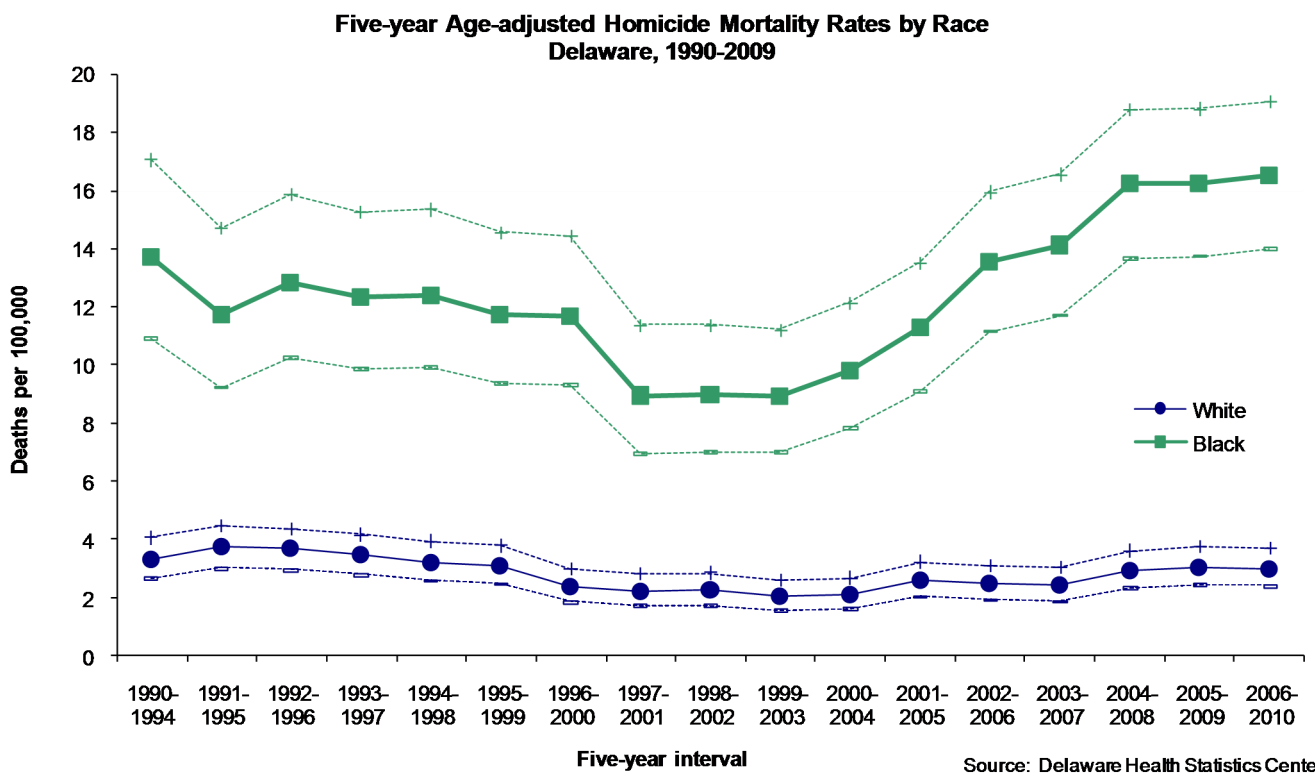

Source: Delaware Health Statistics Center

## MORTALITY

Suicide mortality trends for both black and white populations changed little between 1990-1994 and 2006-2010, with the white rate (13.3) remaining more than double that of the black rate (5.4).

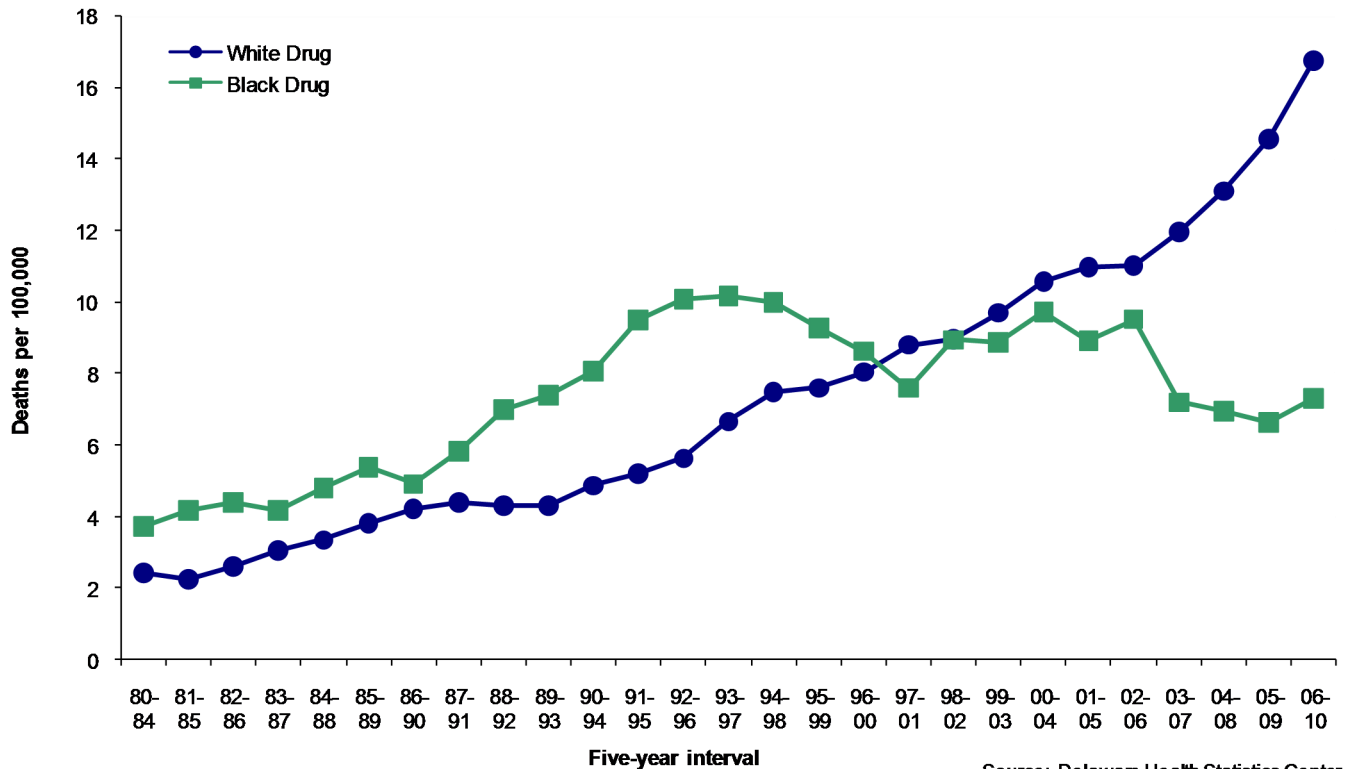

After declining throughout most of the 1990s and reaching their lowest point in 1999-2003, homicide mortality rates have risen 73 percent. The majority of the increase was due to an 85 percent increase in black homicide mortality rates; white homicide mortality rates rose 47 percent during the same time period. In 2006-2010, black and white homicide mortality rates were 16.5 and 3 deaths per 100,000 population, respectively.

## MORTALITY

Though black mortality rates for drug-induced deaths were historically higher than white rates, in 1994-1998 they began a four-year decline that moved them just below white rates by 1997-2001. Since then, white mortality rates have remained higher and continued to rise. By 2006-2010, the white drug-induced mortality rate (16.8) was more than twice the black rate (7.3).

**Five-year Age-adjusted Mortality Rates for Drug-Induced Deaths by Race  
Delaware, 1980-2010**

Source: Delaware Health Statistics Center

**Distribution of Drug-induced Deaths by Race, Sex, and Age Group  
Delaware, 2006-2010**

In 2006-2010, 51 percent of all drug-induced deaths were white males. Of all the race-age groups, white males ages 25-34 were responsible for the single largest proportion (13.7 percent) of drug-induced deaths.

MORTREND

**Notes:**

1. Because of the small numbers of Hispanic deaths and the resulting variability in annual mortality rates, Hispanic mortality rates should be interpreted with caution.
2. Age-Adjusted Death Rate per 100,000, adjusted to 2000 U.S. Standard Population.
3. Figures for decedent's age may not equal total number of annual deaths due to deaths of unknown age.

Congenital malformations (birth defects)	19	2.4
All other causes	240	30.0
<b>Total</b>	<b>799</b>	<b>100.0</b>

Notes:

1. Cause of death categories were derived using the NCHS list of 50 rankable causes of death as specified by NCHS. For specific codes, see Appendix E.
2. There was a three-way tie for the tenth most common cause of Hispanic death; Alzheimer's disease also accounted for 19 deaths.

AADR\_TRND(2)

**Notes:**

1. Rates per 100,000, adjusted to U.S. 2000 population.
2. See Appendix E for ICD-9 and ICD-10 cause of death codes.
3. "---" indicates rate does not meet standards of reliability or precision; based on fewer than 20 deaths in the numerator.

AADR\_TRND(3)

**Notes:**

1. Rates per 100,000, adjusted to U.S. 2000 population.
2. See Appendix E for ICD-9 and ICD-10 cause of death codes.
3. "----" indicates rate does not meet standards of reliability or precision; based on fewer than 20 deaths in the numerator.
