Suggested Citation:
At 72 reported pregnancies per 1,000 women aged 15-44, the 2013-2017 rate of reported pregnancies decreased by 12 percent from the 81.9 rate in 2008-2012. Although pregnancy rates of non-Hispanic black mothers were significantly higher than those of non-Hispanic white mothers in every county, the largest difference between the pregnancy rate of non-Hispanic white (60.2 percent) and non-Hispanic black (90.2 percent) mothers occurred in New Castle County.

**Figure 21. Five-year Average Rate of Reported Pregnancies by Race, Delaware and Counties, 2013-2017**

For non-Hispanic white women, the 30-34 year age group had the highest pregnancy rate at 117.3 pregnancies per 1,000 women in 2013-2017. Non-Hispanic black women had higher pregnancy rates than non-Hispanic white women in all age groups except the 30-34 age group with the highest age group being 25-29 at 145.9 pregnancies per 1,000 women.

**Figure 22. Five-year Average Rate of Reported Pregnancies by Age and Race, Delaware, 2013-2017**

Source: Delaware Department of Health and Social Services, Division of Public Health, Delaware Health Statistics Center
In all three counties, the teen (15-19) pregnancy rates for all races declined between 2008-2012 and 2013-2017. Although all three counties had a significant decline in the non-Hispanic black teen pregnancy rate, New Castle’s non-Hispanic black teen pregnancy rate showed the greatest decline from 87 in 2008-2012 to 47.6 in 2013-2017. Non-Hispanic white teens in New Castle County had the lowest reported pregnancy rate at 15.8 pregnancies per 1,000 women in 2013-2017.

**Figure 23. Five-year Average Teenage (15-19) Pregnancy Rates by County and Race, Delaware, 2008-2012 and 2013-2017**

Kent County had the lowest five-year average pregnancy rate for younger teens aged 15-17 (11.5 pregnancies per 1,000 women). Sussex County’s rate for teens in the same age group was 17.1 pregnancies per 1,000 women. The rates decreased in all counties between 2008-2012 and 2013-2017. The five-year average (2013-2017) pregnancy rate for older teens aged 18-19 was lowest in New Castle County (46.6 pregnancies per 1,000 females) and highest in Sussex County (63.8 pregnancies per 1,000 females). (Table D-8)

In 2017, 1,890 abortions were performed in Delaware; 1,667 to Delaware residents and 223 to non-residents.

- Twenty-one percent of all pregnancies to females under 20 years old ended in termination in 2017.
  - 26 percent of pregnancies to non-Hispanic white females under 20 years old and 25 percent to non-Hispanic black females under 20 years old ended in termination in 2017.

- Married women undergo significantly fewer terminations than their single counterparts.
  - 2.4 percent of pregnancies to non-Hispanic white married women ended in termination and 5.7 percent of pregnancies to non-Hispanic black married women ended in termination in 2017.
  - When the women were unmarried, these numbers increased to 24.4 percent among non-Hispanic white women and 24 percent among non-Hispanic black women.

- There were 56 fetal deaths of Delaware residents in 2017.
- There were 10,835 live births to Delaware residents in 2017.

Notes:
1. Percentages may not add to 100% due to rounding.
2. Percentages are calculated based upon the total number of pregnancies within each race-education category.
3. Percentages for the race category "Other" may be misleading due to the small number of pregnancies in this category.
4. *Women of Hispanic origin may be of any race.

Notes:
1. Reported pregnancies include live births, fetal deaths, and induced terminations of pregnancy.
2. For Delaware and counties, pregnancy rates represent the number of reported pregnancies to women of all ages per 1,000 women 15-44 years of age in the population.
3. For each age group, the denominator for the pregnancy rate is the total number women in the county/state within that age category except the "<15" and "40+" age categories which are based on women ages 10-14 and 40-49, respectively.

</table>

Notes:
1. Reported pregnancies include live births, fetal deaths, and induced terminations of pregnancy.
2. For Delaware and counties, pregnancy rates represent the number of reported pregnancies to women of all ages per 1,000 women 15-44 years of age in the population.
3. For each age group, the denominator for the pregnancy rate is the total number women in the county/state within that age category except the "<15" and "40+" age categories which are based on women ages 10-14 and 40-49, respectively.
4. Comparisons using rates for the "<15" and "40+" age categories may be misleading due to the small number of events in these categories.

Fetal & Perinatal Deaths
Perinatal mortality refers to deaths occurring in the period around delivery, and includes late fetal deaths (>28 weeks gestation) and early infant deaths (<7 days of age). Perinatal mortality and infant mortality follow the same trends, decreasing from 2001-2005 until 2013-2017. By 2013-2017 the rates were nearly the same at 7.1 perinatal deaths per 1,000 live births and 7.3 infant deaths per 1,000 live births. The fetal death trends paralleled those of perinatal mortality trends with fetal death rates remaining constantly lower than perinatal rates.

**Figure 24. Five-year Fetal, Perinatal, and Infant Mortality Rates, Delaware, 2000-2017**

![Five-year Fetal, Perinatal, and Infant Mortality Rates](source)

Non-Hispanic black perinatal mortality rates for 2013-2017 were substantially higher than non-Hispanic white perinatal mortality rates, regardless of county. In New Castle County, the non-Hispanic black perinatal mortality rate of 13.2 perinatal deaths per 1,000 live births was nearly three times the non-Hispanic white perinatal mortality rate of 4.6 perinatal deaths per 1,000 live births.

**Figure 25. Five-year Average Perinatal Mortality Rates by Race and County, Delaware, 2013-2017**

![Five-year Average Perinatal Mortality Rates](source)
FETAL AND PERINATAL DEATHS

In 2017, 56 fetal deaths were reported in Delaware. In 2013-2017, the fetal mortality rate was 5.2 fetal deaths per 1,000 live births. Fetal mortality rates for non-Hispanic black women have been consistently higher than the rates for non-Hispanic white women, and in 2013-2017 they were 185 percent higher than the rate of non-Hispanic white women (9.7 versus 3.4).

Notes:
1. Percentages may not add to 100% due to rounding.
2. Percentages are calculated based upon the total number of induced terminations of pregnancy in each race category.
3. Percentages for the race category "Other" may be misleading due to the small number of induced terminations of pregnancy in this category.
